## Sustainability Skills Survey 2019-20

This report gives the results for Aston University respondents.

The following charts are restricted to the top 20 codes. Lists are restricted to the most recent 100 rows.

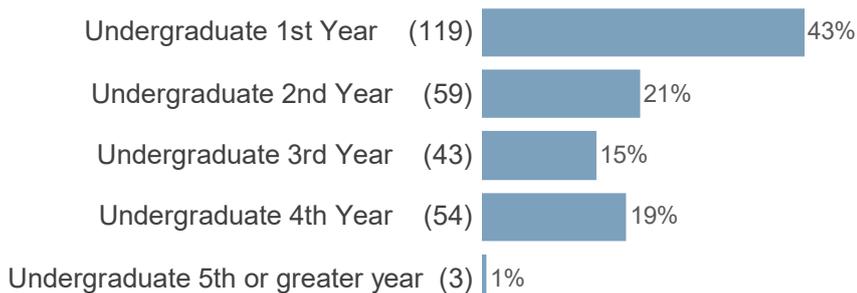

Which of these best describes the course you are currently taking?

**Please select one only**

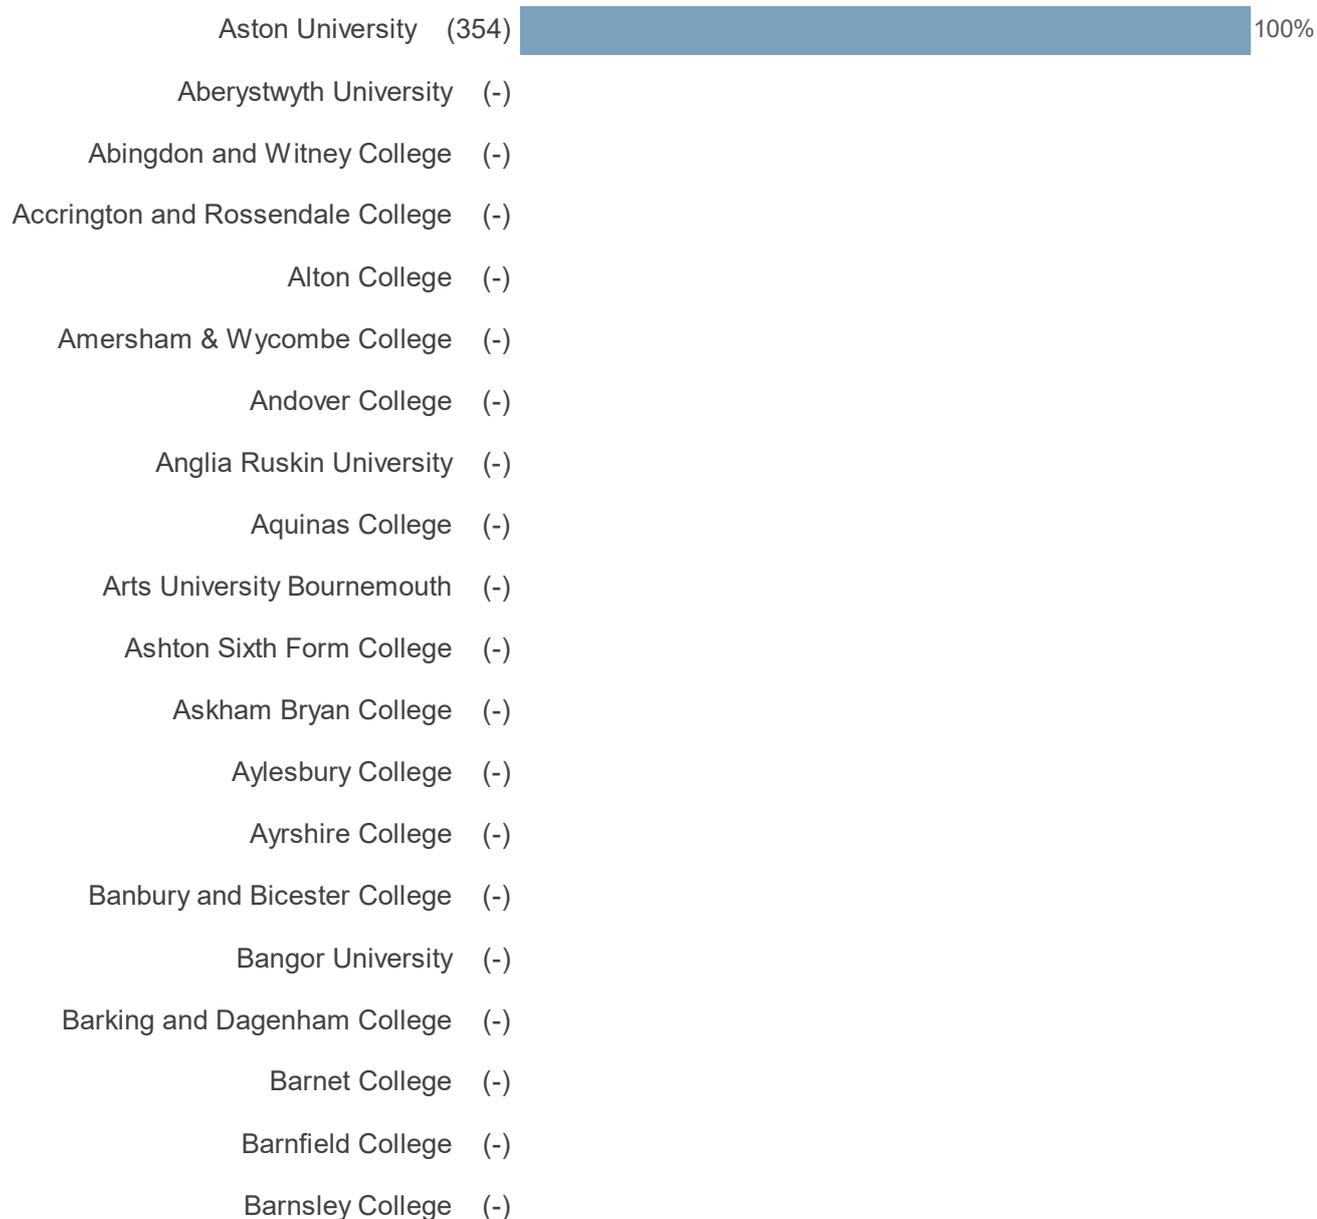

What year of study are you in?

**Please pick one**

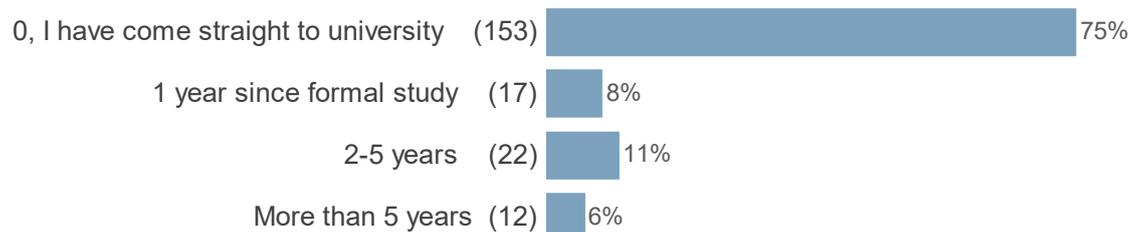

## Where do you currently study?

**Please pick one**

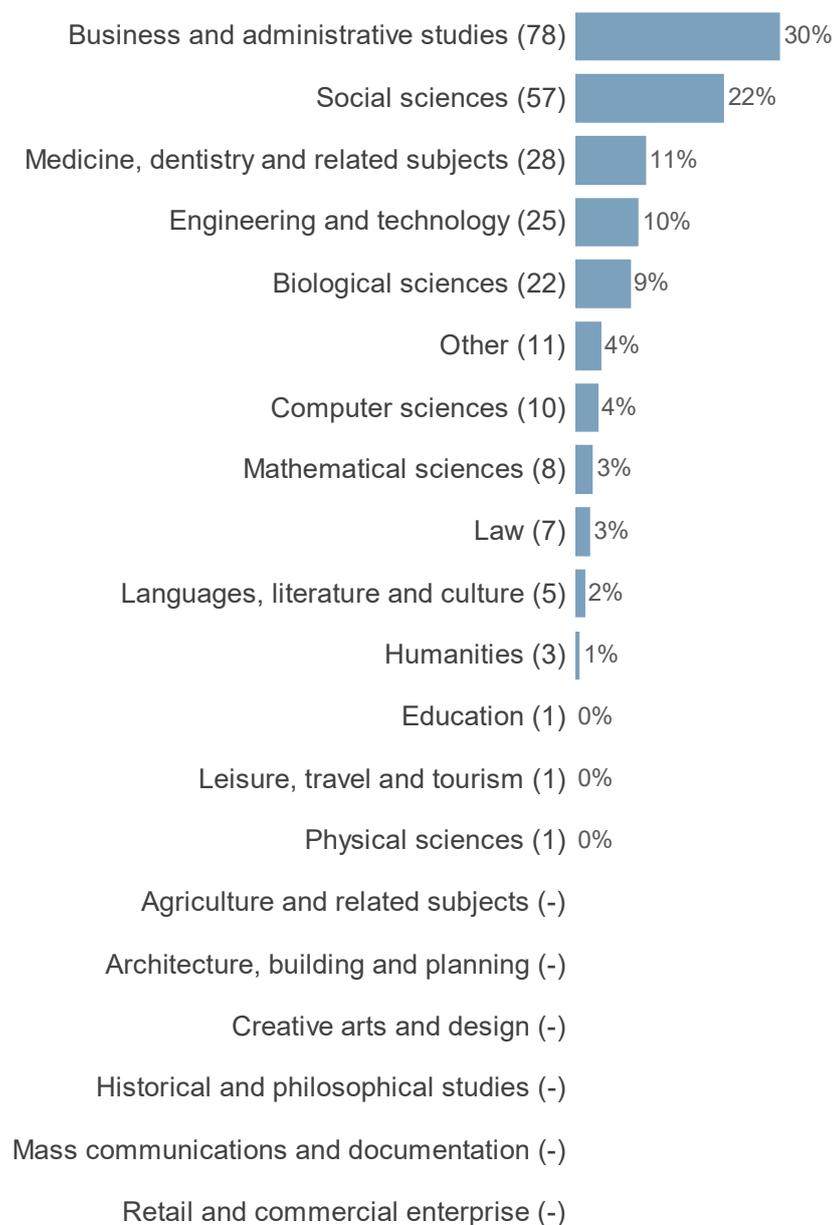

## How many academic years have passed since you last studied prior to attending your current university?

**Select one only**

## Which option best describes your course or degree?

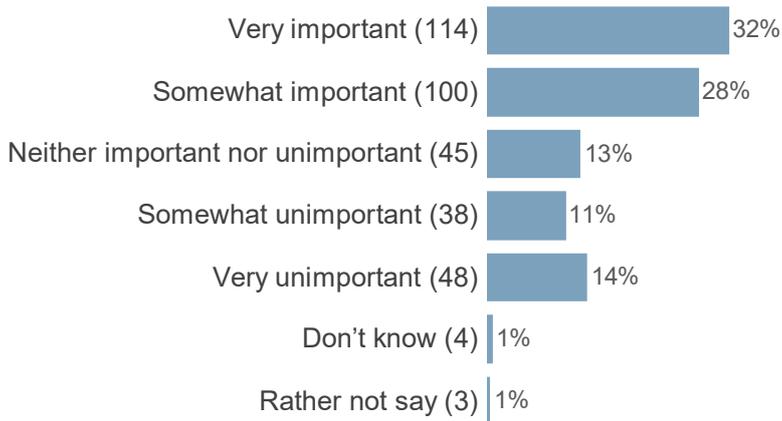

**Select one only**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

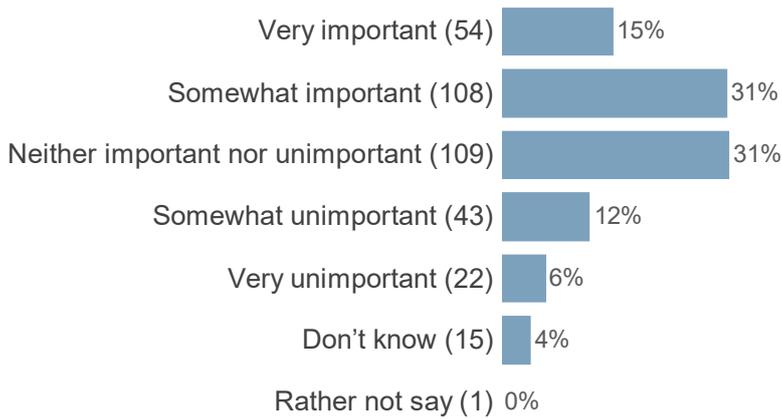

**(The proximity of the university / college to home)**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

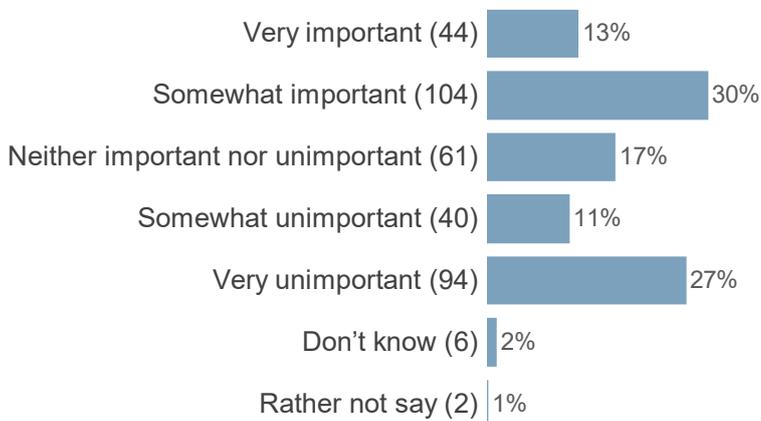

**(How seriously the university / college takes environmental issues)**

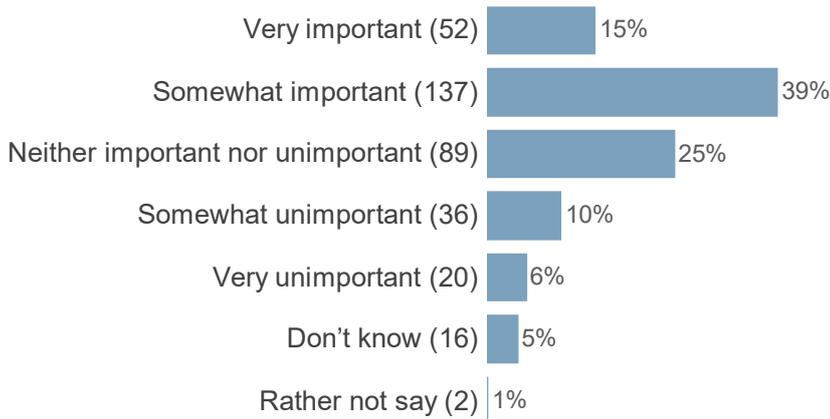

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

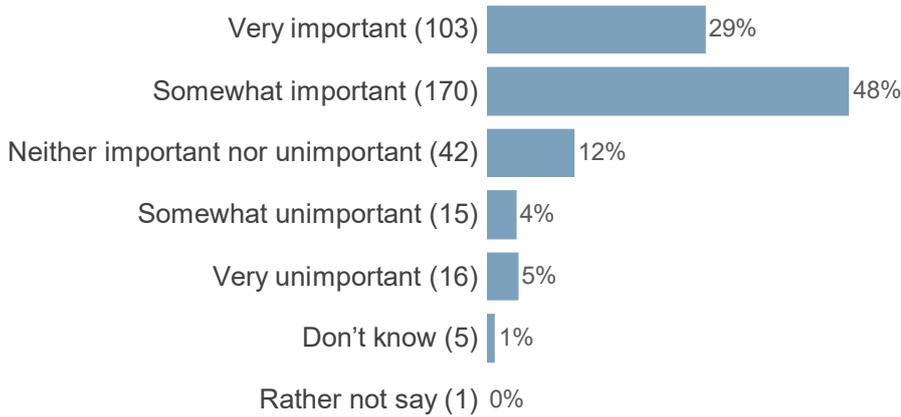

**(Nightlife)**

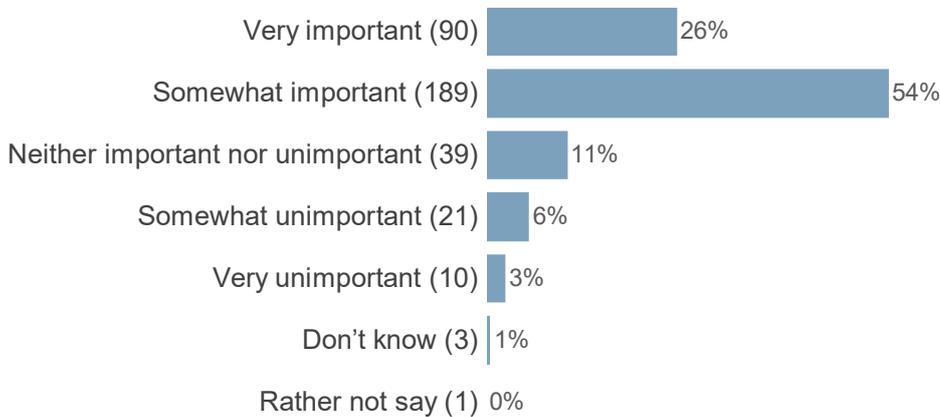

How important were the following when choosing which college or university to apply to?  
**For each option, select one only**  
**(How seriously the university / college takes global development issues)**

How important were the following when choosing which college or university to apply to?  
**For each option, select one only**  
**(The position of the course in league tables)**

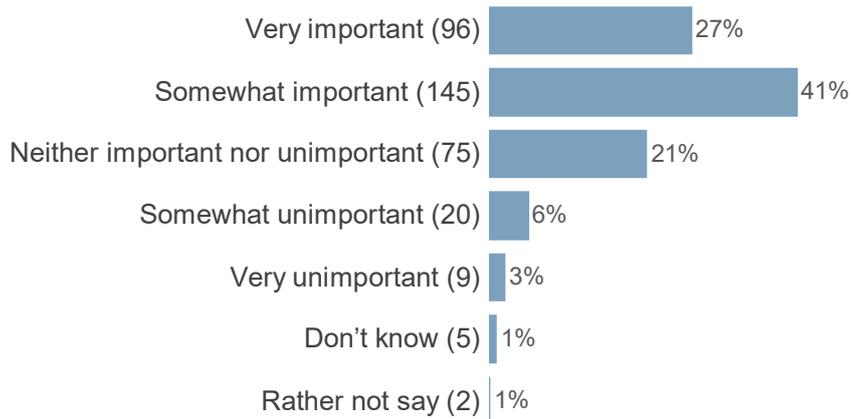

How important were the following when choosing which college or university to apply to?  
**For each option, select one only**  
**(The position of the university / college in league tables )**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

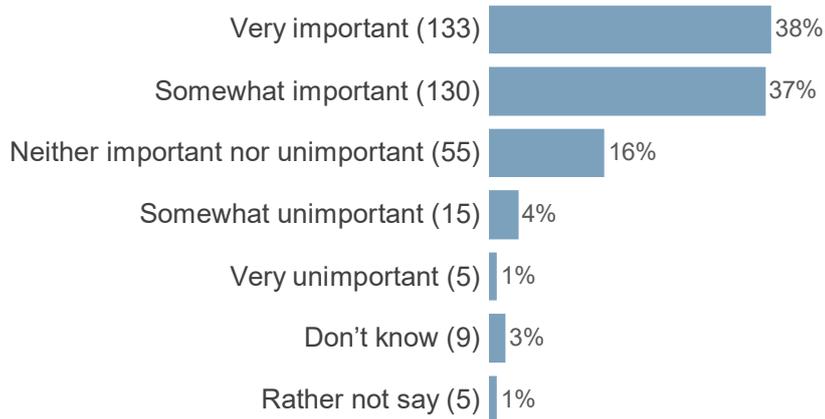

**(Attractiveness of location )**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

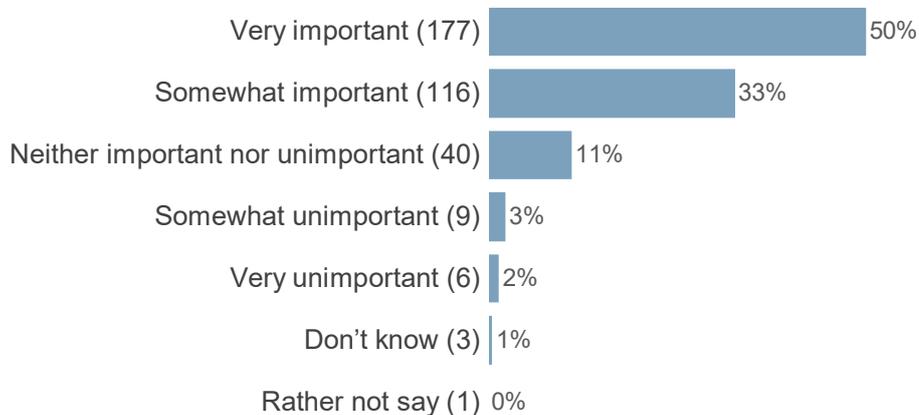

**(The 'A' level or equivalent grades or points demanded )**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

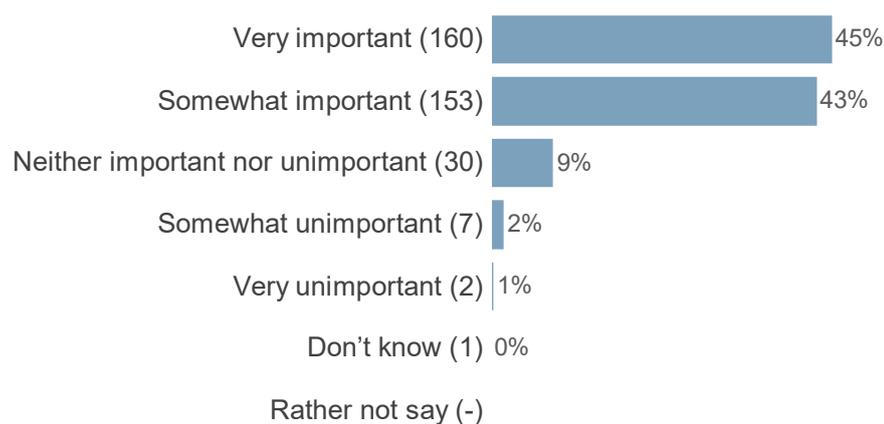

**(The teaching methods)**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

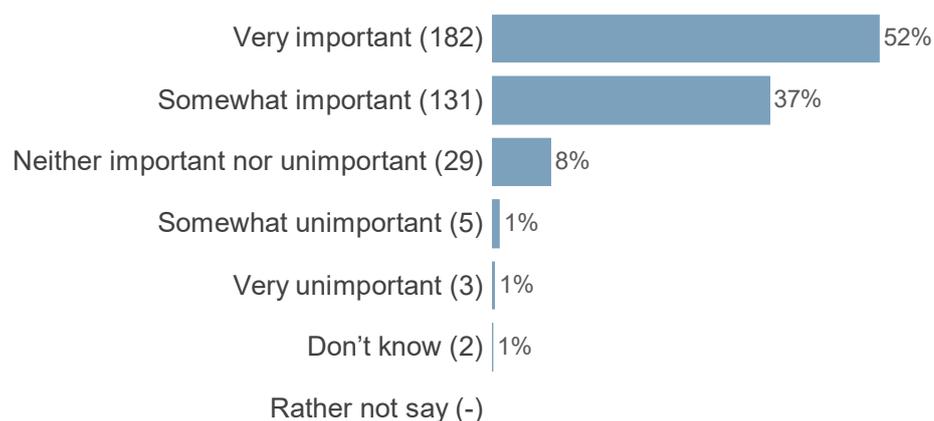

**(The reputation of the university / college )**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

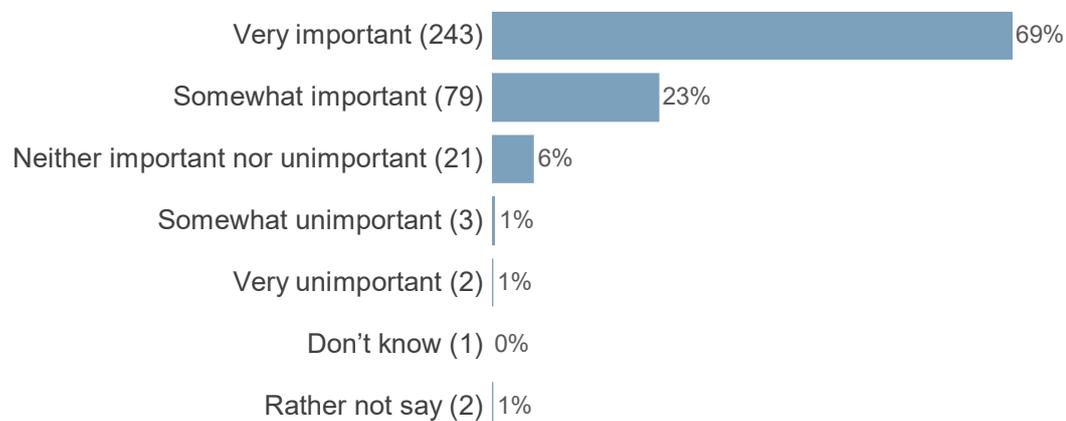

**(Reputation of the course)**

How important were the following when choosing which college or university to apply to?

**For each option, select one only**

**(Employment prospects after completing the course)**

What were the main reasons for taking the course you're currently studying?

**Please select your top three reasons only**

**If other, please specify**

---

I have to in order to get my desired job

---

To explore the Unkown

---

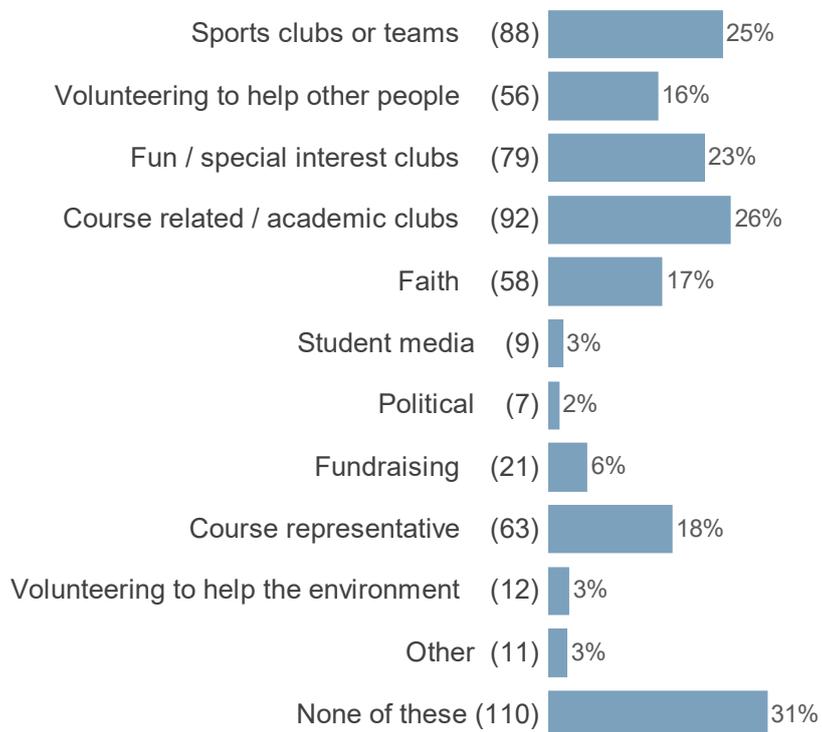

I didn't get the grades at A Level and had no other choice

---

Make a change in society for the better

Which, if any, of the following groups, clubs or societies are you part of at your current university / college?

**Please select all that apply**

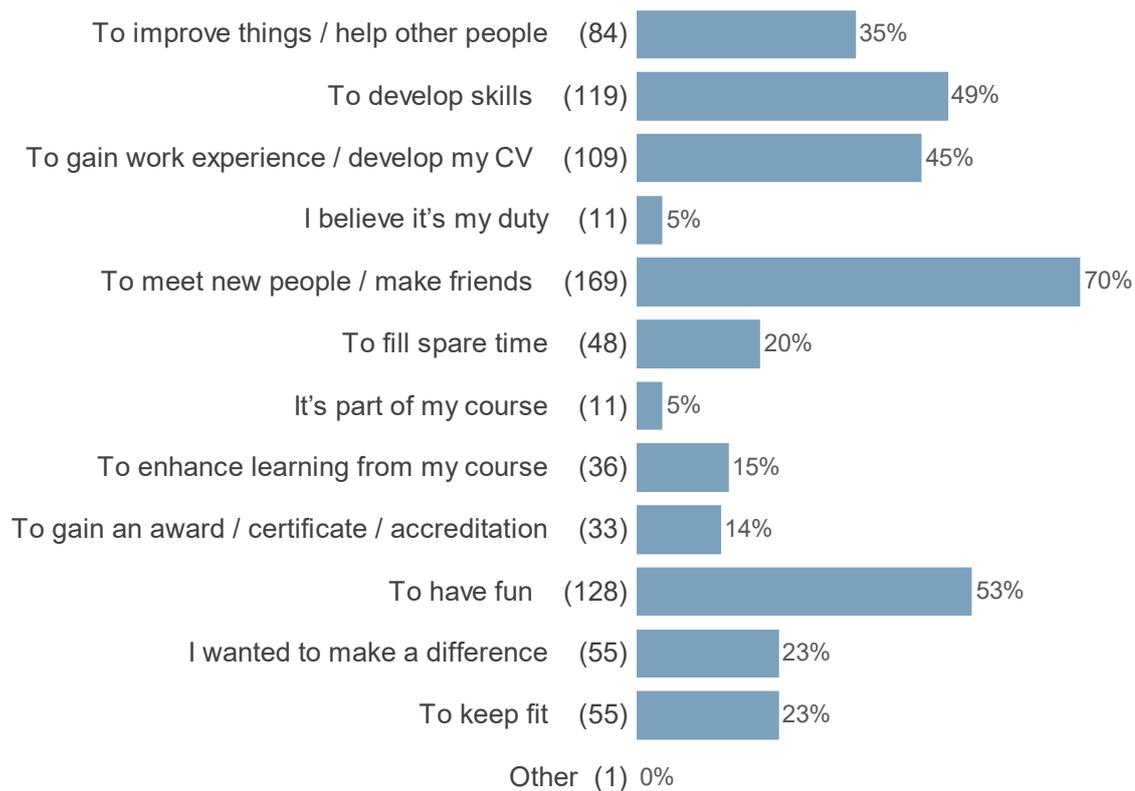

**Please tell us what other groups, clubs or societies you're part of.**

Student Representation	Hindu Society	ACS
Enactus	Culture	Enactus and TEDx
Student Minds (mental health)	ACS	mentor
Peer Mentor		

## What motivated you to take part in these clubs, societies or groups?

**Please select all that apply**

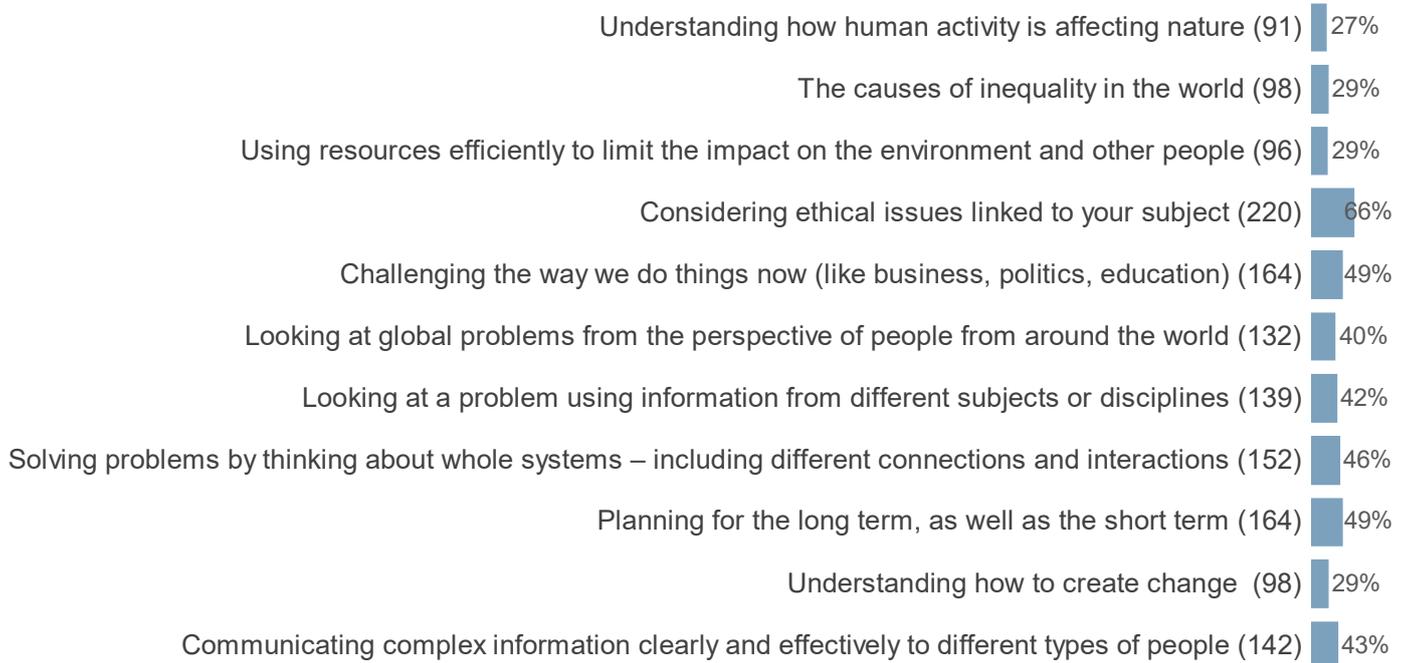

## Please tell us why else you got involved.

Passion for the club

Please read the following list of skills, knowledge and attributes carefully.

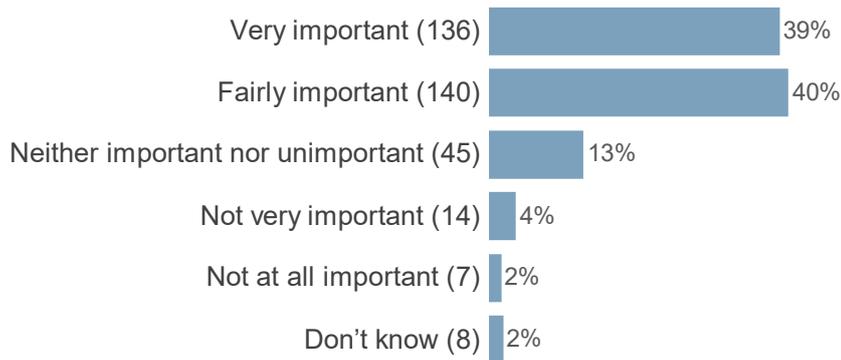

Thinking of your time at university / college, have any of the following been covered in the teaching so far?

**Select all that apply**

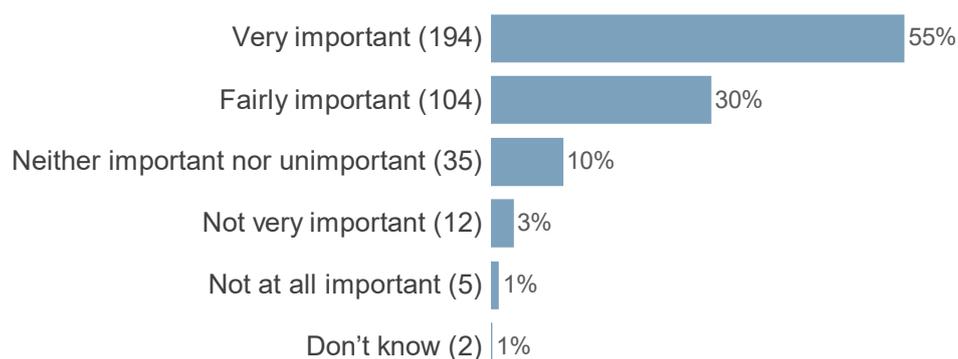

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Understanding how human activity is affecting nature)**

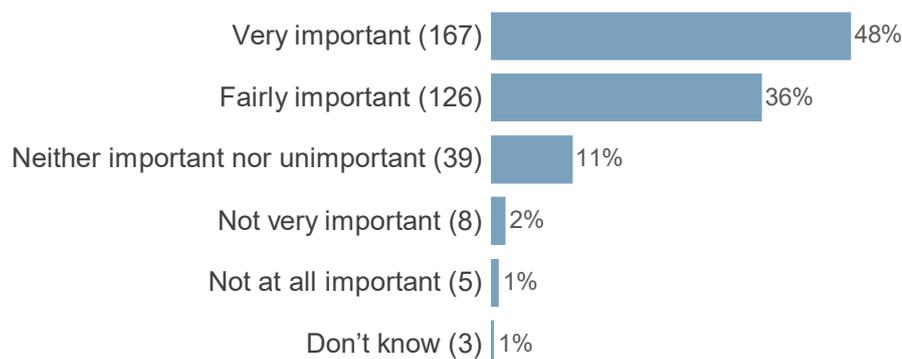

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (The causes of inequality in the world)**

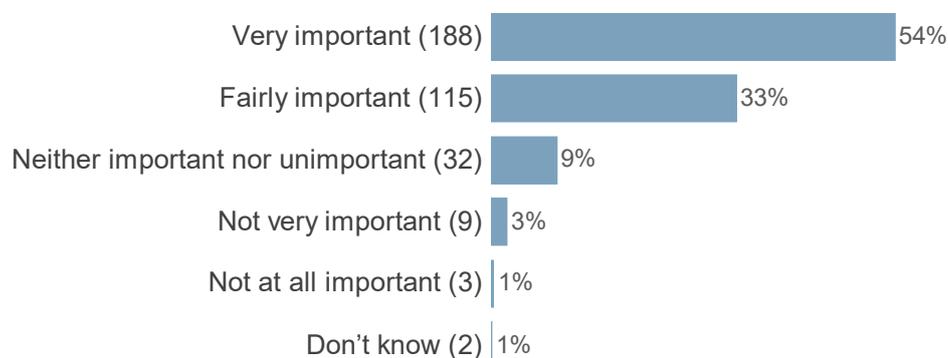

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Using resources efficiently to limit the impact on the environment and other people)**

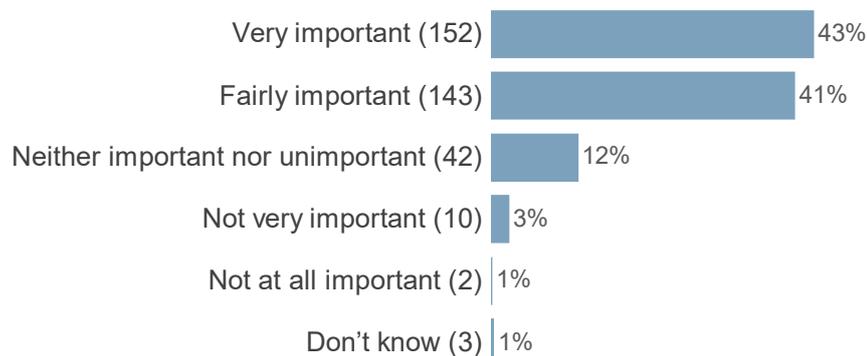

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Considering ethical issues linked to your subject)**

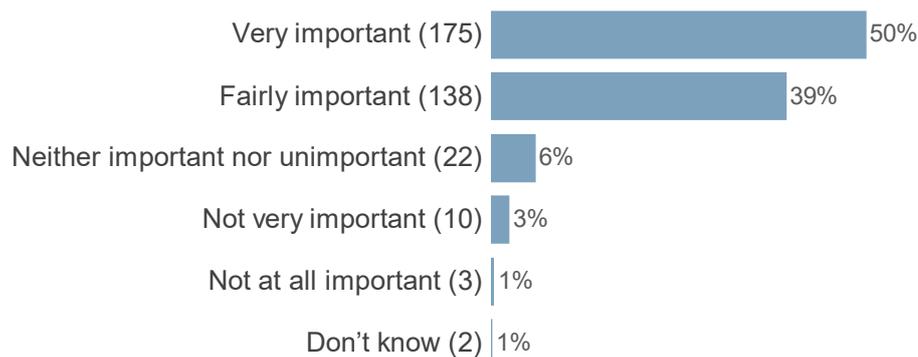

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Looking at global problems from the perspective of people from around the world)**

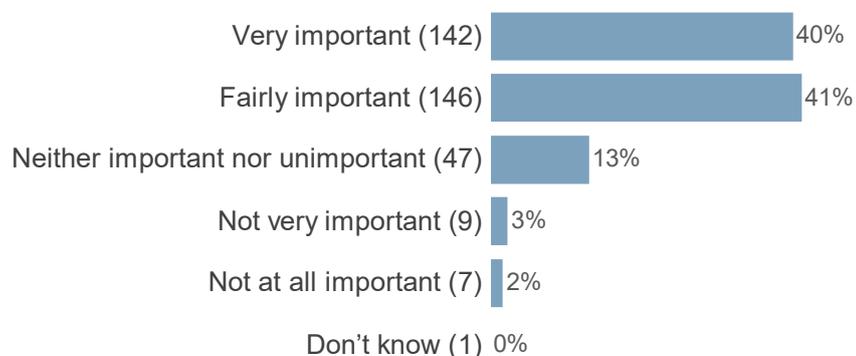

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Challenging the way we do things now (like business, politics, education))**

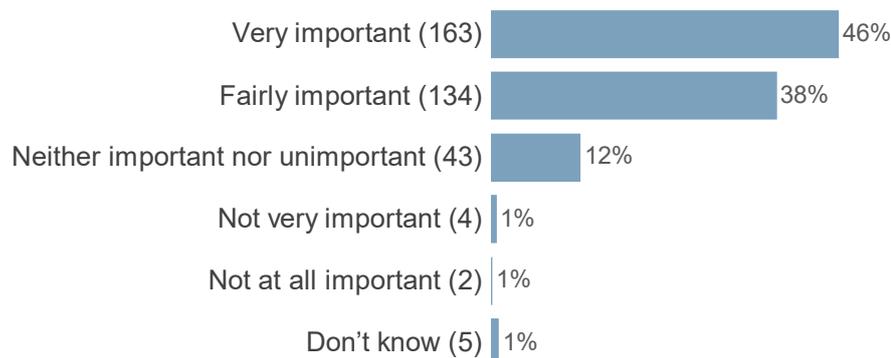

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Looking at a problem using information from different subjects or disciplines)**

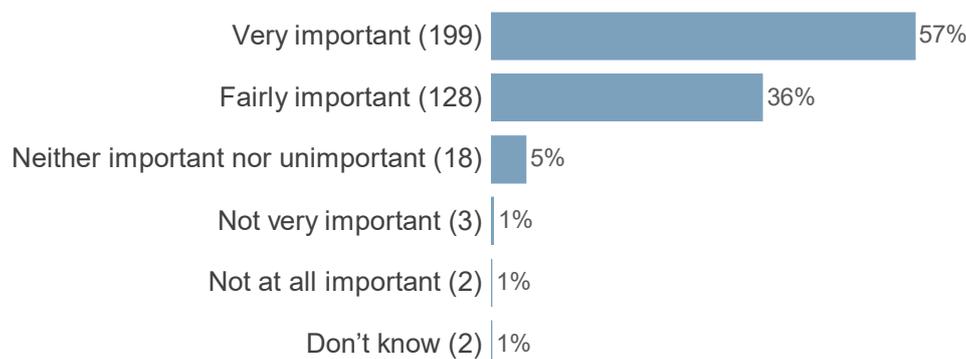

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Solving problems by thinking about whole systems – including different connections and interactions)**

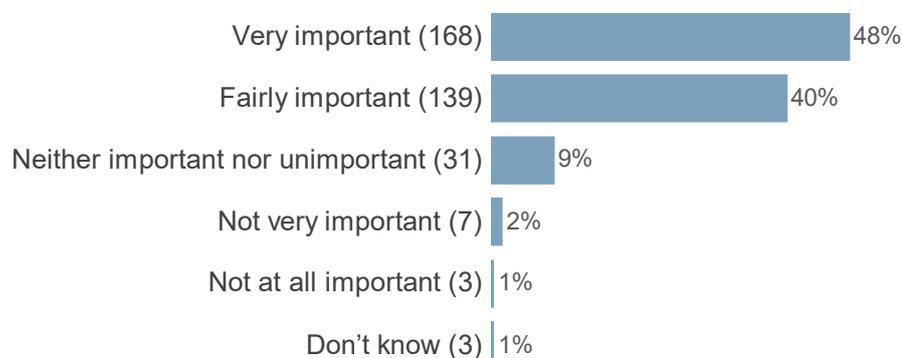

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Planning for the long term, as well as the short term)**

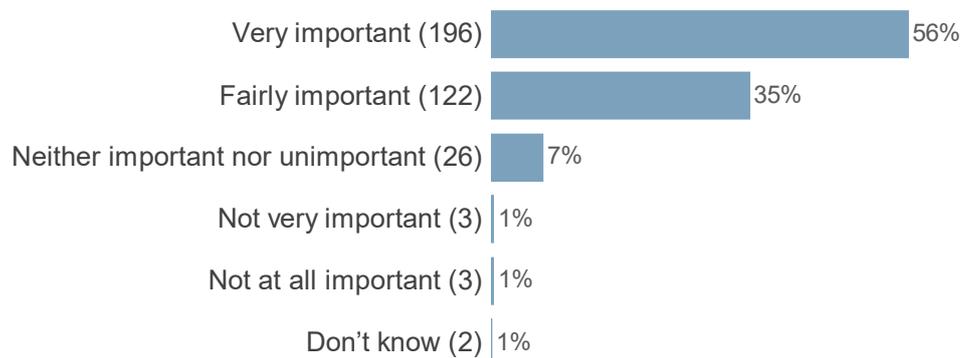

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Understanding how to create change)**

And how important to you individually that you learn these skills, attributes and knowledge during your time at university / college?

**Please select one for each option (Communicating complex information clearly and effectively to different types of people)**

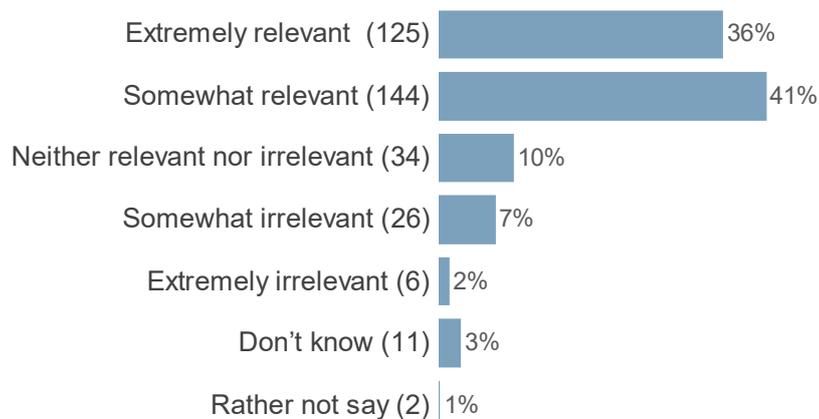

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Build the material into the existing content in the course )**

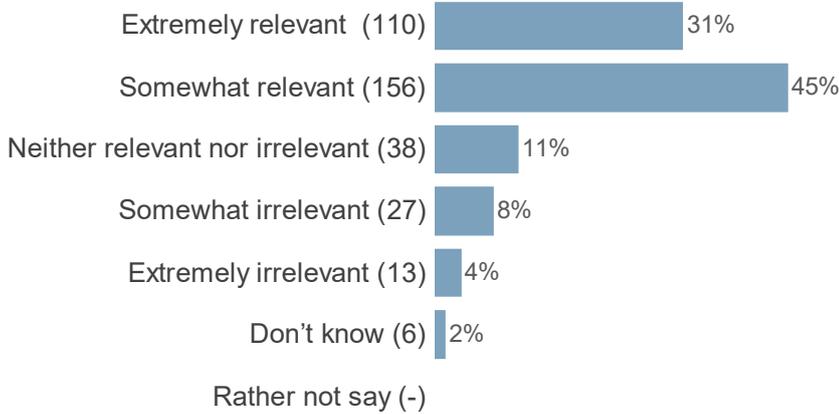

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Offer a specific module on the course)**

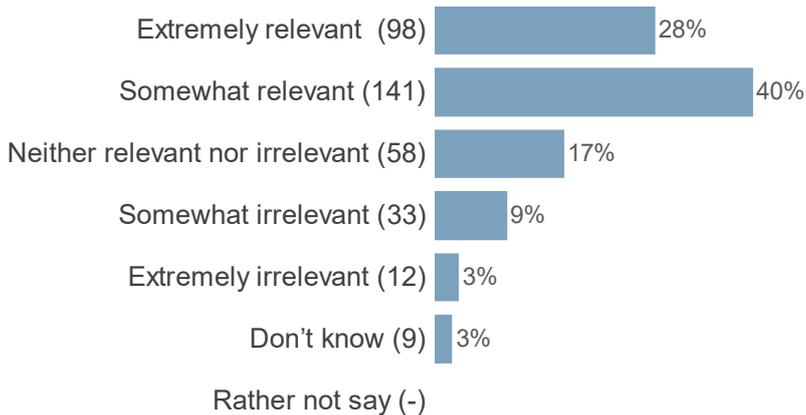

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Run extra-curricular activities within departments )**

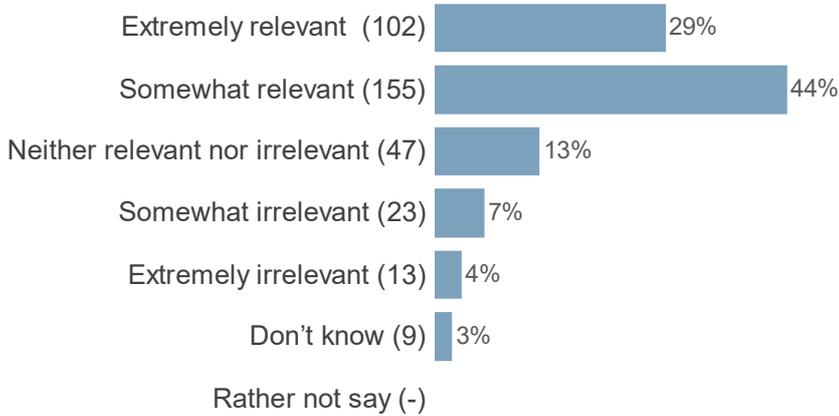

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Run extra-curricular activities within the students' union)**

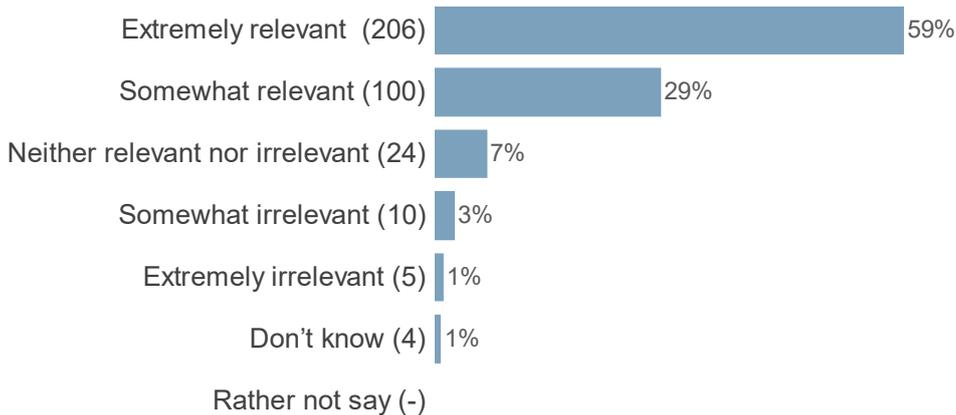

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Offer placements or work experience)**

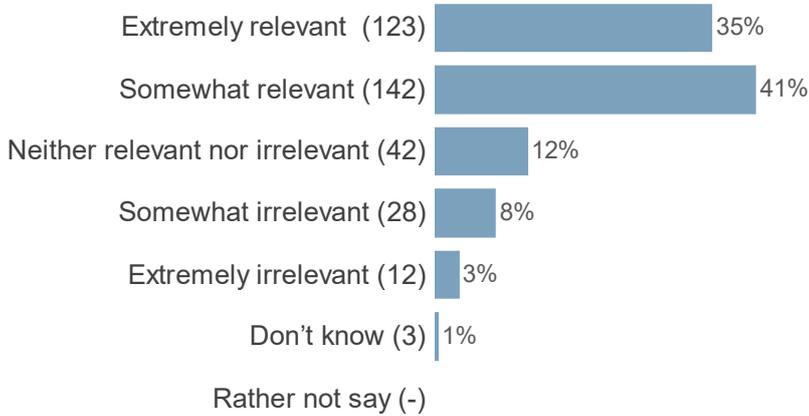

Imagine all university / college courses are required to include the skills and knowledge needed to help other people and the environment.

What do you think the most relevant way of including the skills and knowledge needed to help other people and the environment within your own course would be?

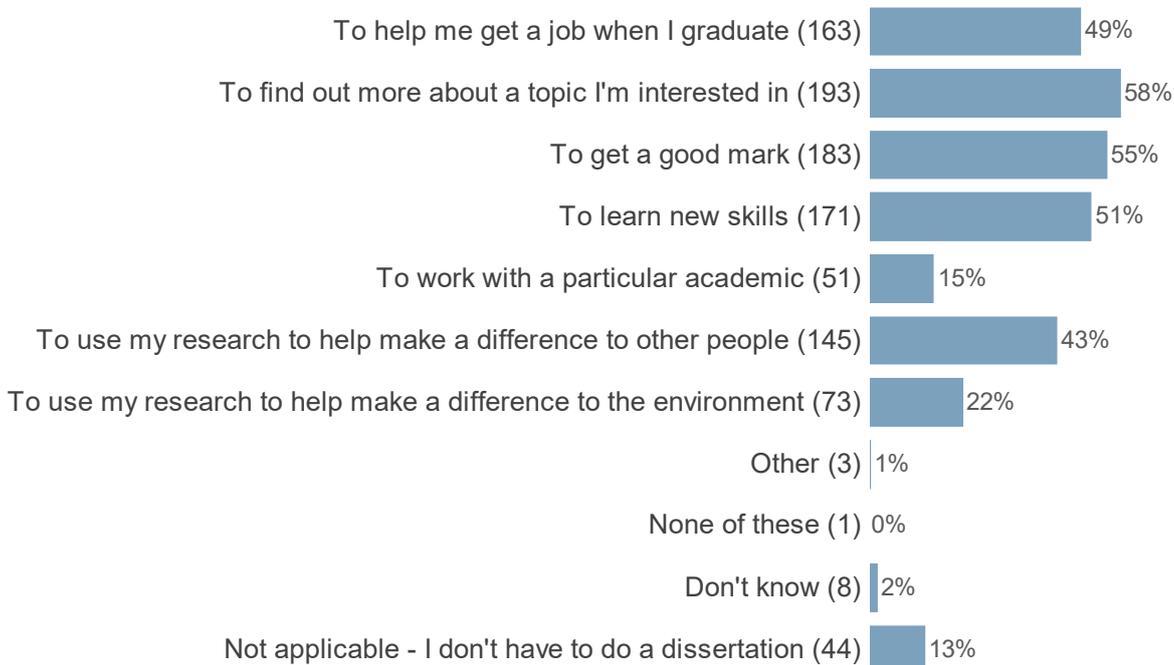

**Thinking about the skills and knowledge covered in this survey, please select one answer for each option**

**(Link coursework or dissertations to the issues)**

If your course includes completing a dissertation, what do you hope to get out of completing your dissertation?

**Please select all that apply**

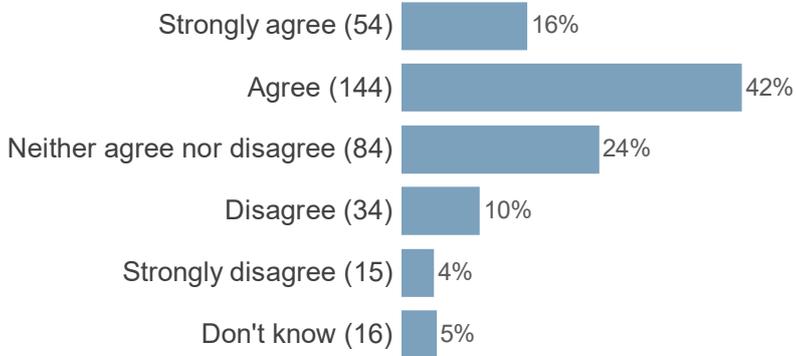

**If other, please specify**

Developing understanding and insight into an issue. Developing a personal, informed opinion

To what extent do you agree or disagree with the following statement about the place where you currently study:

"I am able to contribute to the development of the curriculum for my course."

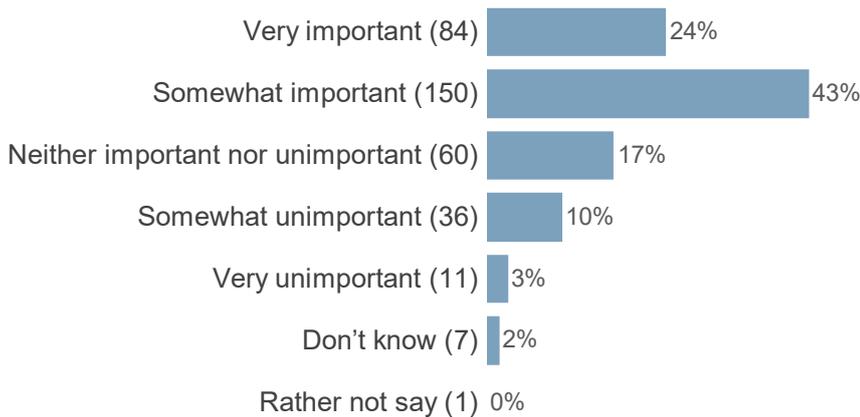

**Please select one only**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

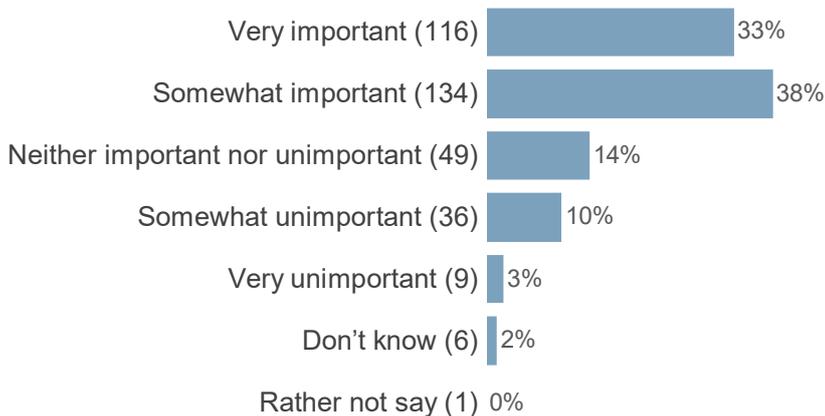

**(Understanding how human activity is affecting nature)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

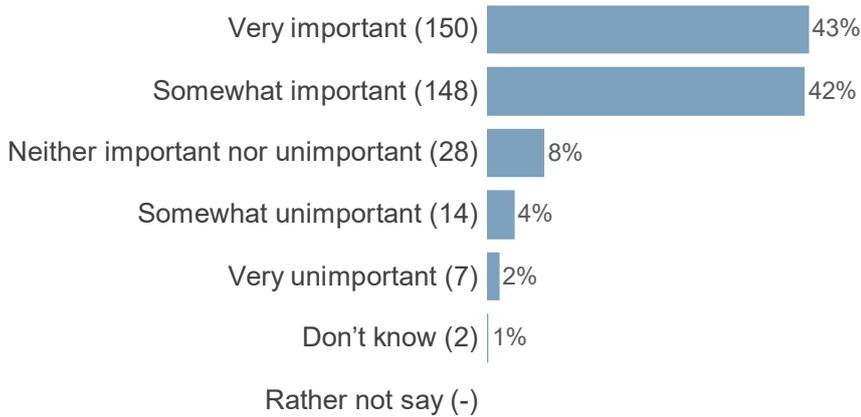

**(The causes of inequality in the world )**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

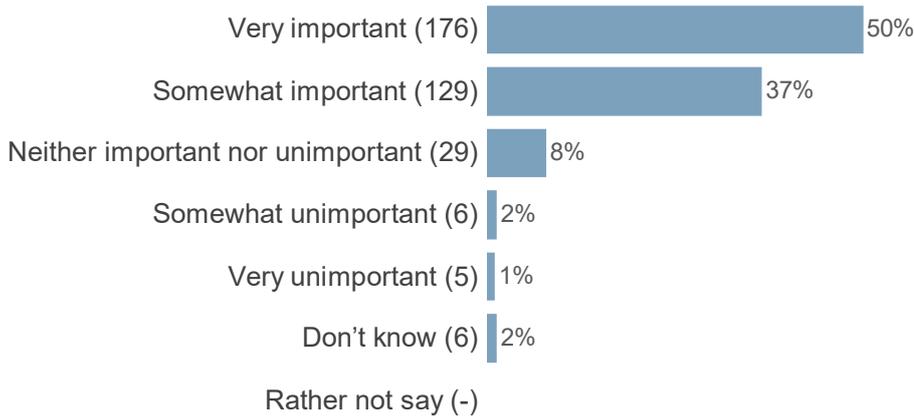

**(Using resources efficiently to limit the impact on the environment and other people)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

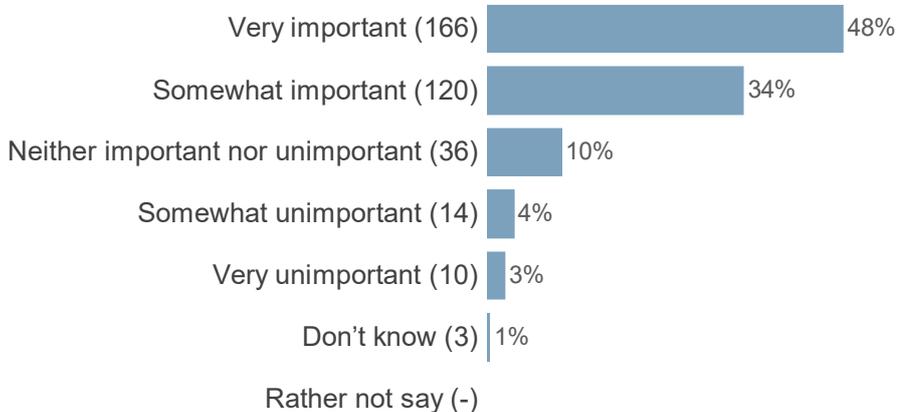

**(Considering ethical issues linked to your subject)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

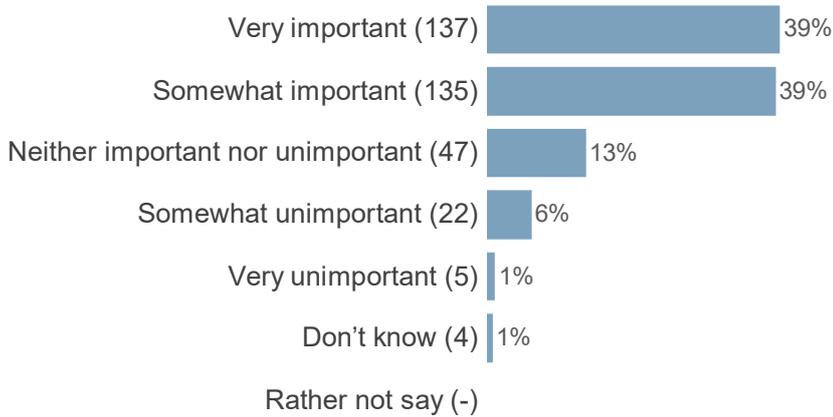

**(Challenging the way we do things now (like business, politics, education))**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

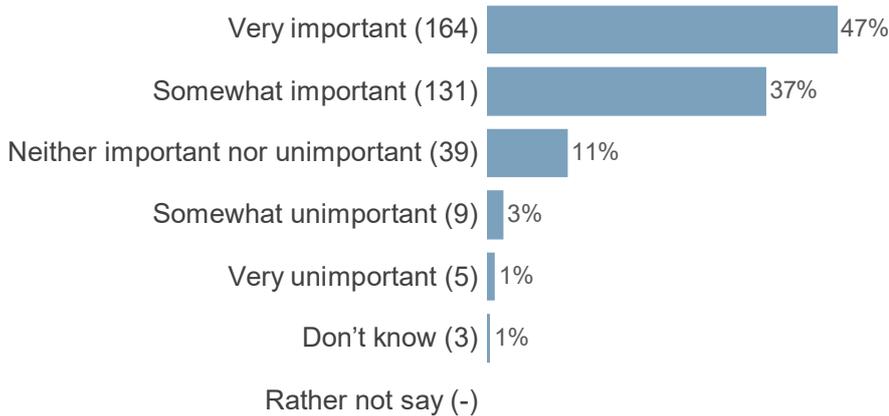

**(Looking at global problems from the perspective of people from around the world)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

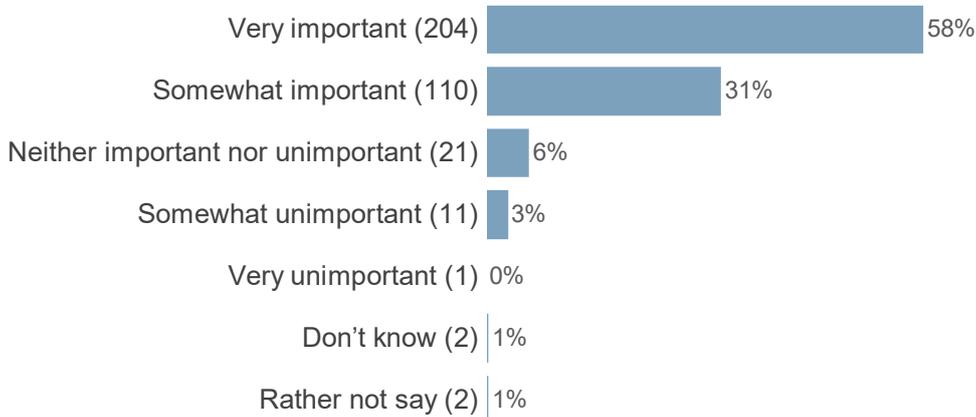

**(Looking at a problem using information from different subjects or disciplines)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

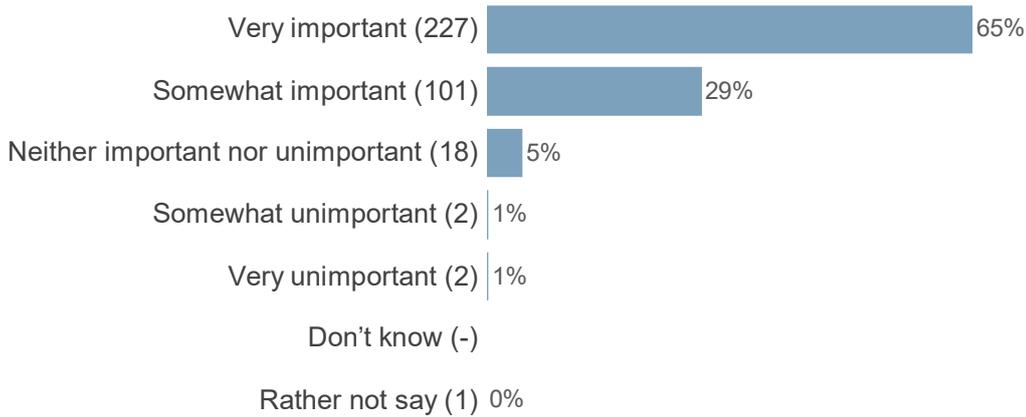

**(Solving problems by thinking about whole systems – including different connections and interactions)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

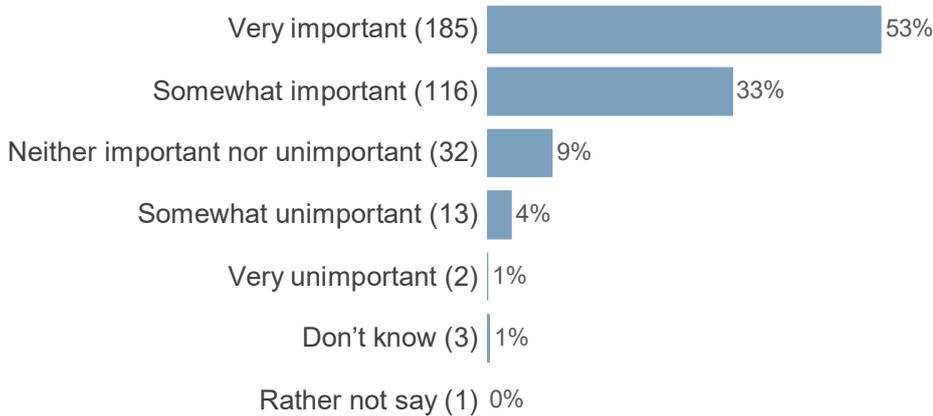

**(Planning for the long term, as well as the short term)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

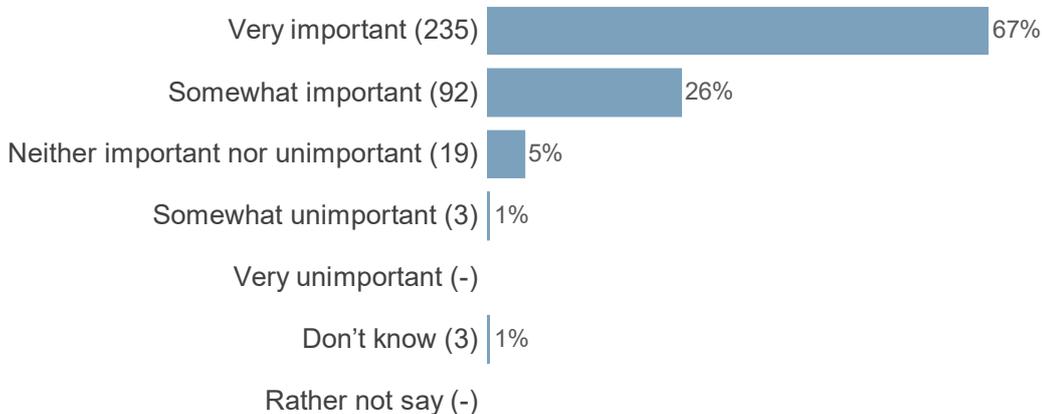

**(Understanding how to create change)**

How important do you think the following skills and knowledge are to your future employers?

**Please select one for each option**

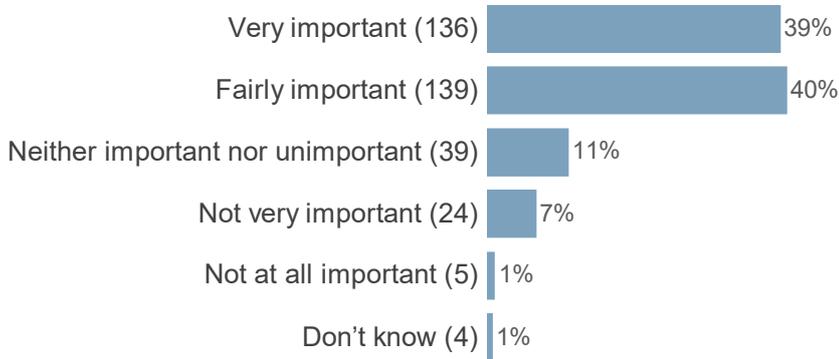

**(Communicating complex information clearly and effectively to different types of people)**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

**Please select only for each option**

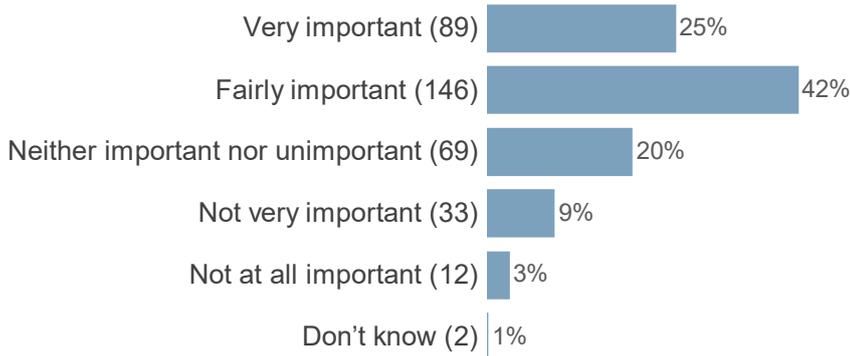

**(A chance to work in a business / organisation that makes a difference to social and environmental issues )**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

**Please select only for each option**

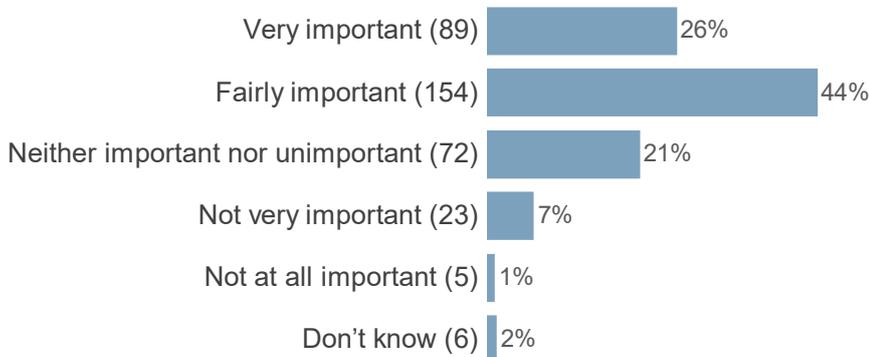

**(A job that matches the skills I have, without additional training )**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

**Please select only for each option**

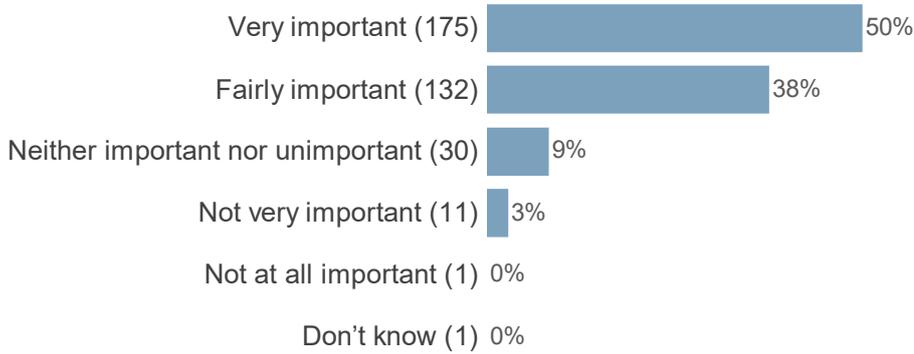

**(A role that contributes to helping the environment )**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

**Please select only for each option**

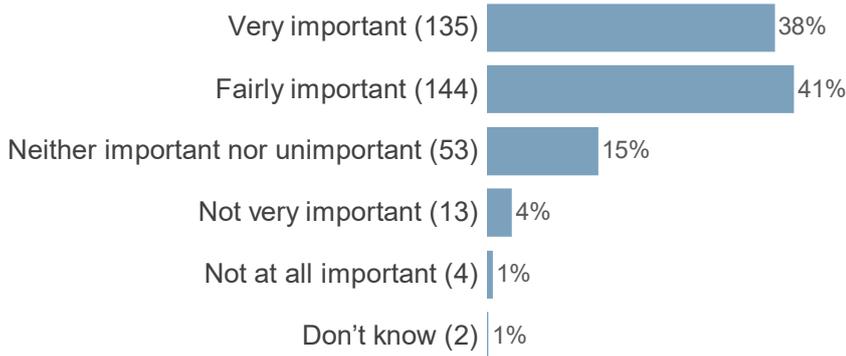

**(A good starting salary )**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

**Please select only for each option**

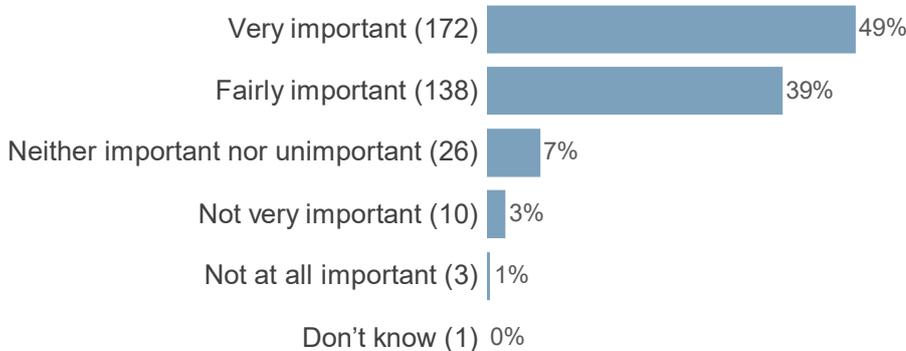

**(A role that contributes to development within the local community )**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

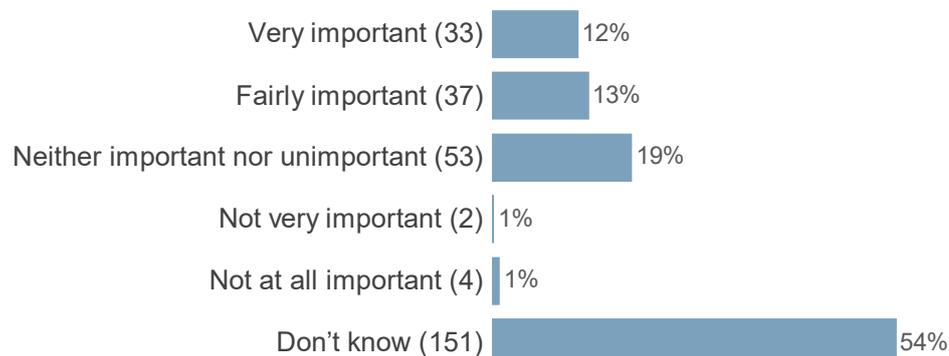

**Please select only for each option**

**(Opportunities to progress quickly)**

Thinking about your future employer, how important, if at all, do you think the following factors will be when considering which jobs to apply for?

**Please select only for each option**  
**(Other)**

### If other, please specify

Good working environment

A job that I enjoy & that I know somewhere down the line, I will be making a difference to human life

N/A

A company that values their employees

Location

A job that matches the skills I have, with additional training to progress and become better.

career development

na

Kindness to others

None

??

Global communications

Location of job

The opportunity to help others

N/A

Making a difference to people's lives

Private sector

Ethical and non discriminatory work environment

ability to progress with no discrimination

The life/work balance is important as well

Training provided, team building and support

A chance to work in a business / organisation that makes a difference to social inequalities

Challenging enough

N/A?

transparency

a good environment

Eradication of language barriers.

A job where I am content and happy and enjoy what I am doing

being likable

**If other, please specify**

location

stable job

-

I don't really understand this part of the question?

Location of the job. Health benefits associated with the job; e.g. insurance for medical care.

Learn new skills

Training and learning opportunities

Interesting work

Atmosphere of the working environment.

I don't know

-

Assuming all other factors are equal, please select which option you think that you would choose.  
**Select one only**

1. A position with a starting salary of £1000 higher than average (£20,000) in a company with a poor environmental and social record (66)  19%
2. A position with a starting salary of £1000 lower than average (£20,000) in a company with a strong environmental and social record (285)  81%

Assuming all other factors are equal, please select which option you think that you would choose.  
**Select one only**

1. A position with a starting salary of £3000 higher than average (£20,000) in a company with a poor environmental and social record (173)  49%
2. A position with a starting salary of £3000 lower than average (£20,000) in a company with a strong environmental and social record (179)  51%

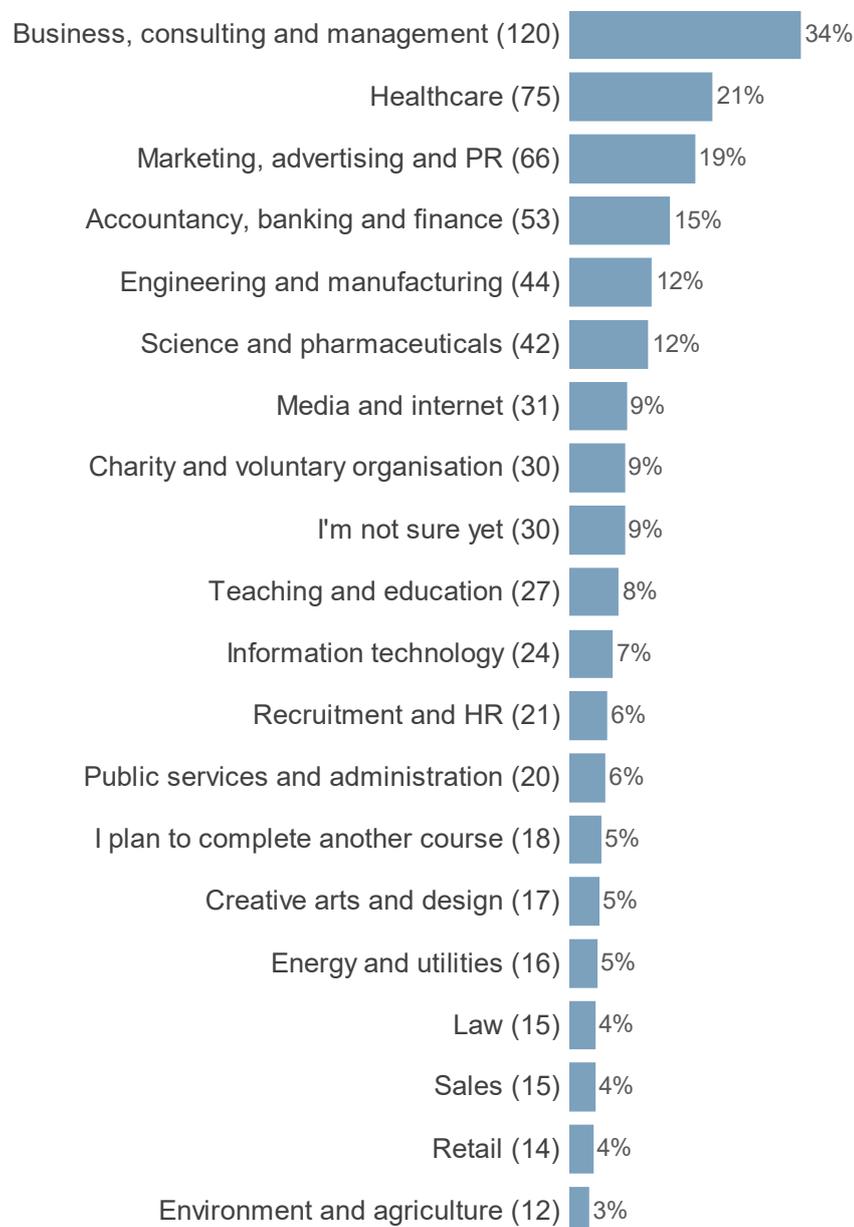

Assuming all other factors are equal, please select which option you think that you would choose.  
**Select one only**

## We'd like to know what your plans are for after you finish your course.

### What kind of organisation do you see yourself working in when you have completed your current course?

Please pick one only

### Please tell us what type of organisation you see yourself working in.

---

Go on to begin a masters. However after that, an organisation specifying in medical engineering

---

Science, Healthcare, Social Care (where Psychology would fall under - specifi. Psychology Assistant)

---

Research Institution

---

Archives

---

At a University

---

Social Policy

---

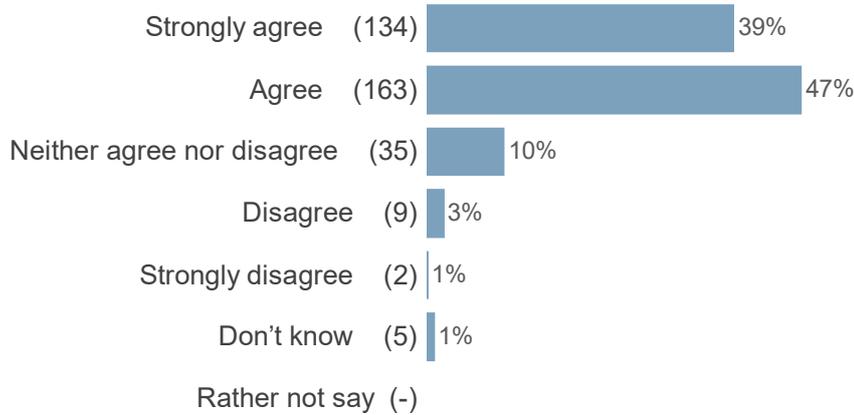

Government

---

Research and development

To what extent, if at all, do you agree that universities / colleges should be obliged to develop student's social and environmental skills as part of their courses?

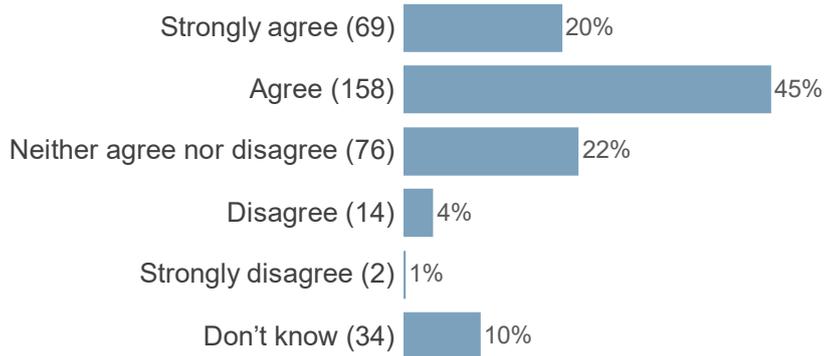

**Select one only**

To what extent do you agree or disagree with the following statements?

**Please select one only for each statement**

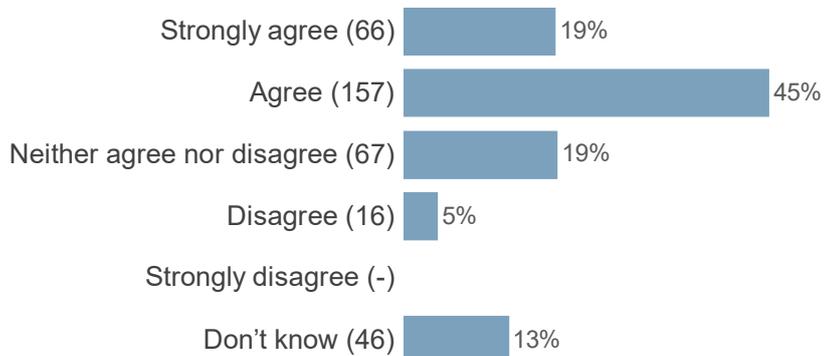

**(My university / college takes action to limit the negative impact it has on the environment and society )**

To what extent do you agree or disagree with the following statements?

**Please select one only for each statement**

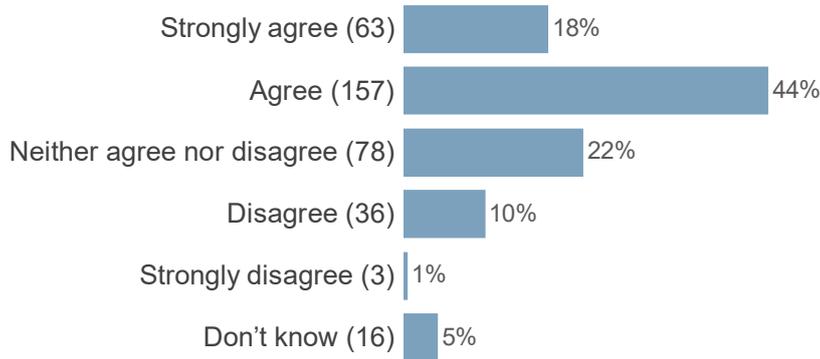

**(My students' union takes action to limit the negative impact it has on the environment and society)**

To what extent do you agree or disagree with the following statements?

**Please select one only for each statement**

**(Being a student at my university / college encourages me to think and act to help the environment, and other people)**

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

---

lasting for future generations - environmentally conscious

---

To keep developing within the community but do so in a way that is sustainable for the environment

---

Caring and looking after the environment and people living in the community.

---

Developing infrastructure that uses renewable resources

---

Development that doesn't have a detrimental effect on the environment.

---

Sustaining natural resources

---

Changes which bring about a positive outcome for the future, that can last for a lifetime.

---

Sustainable development means that we are enhancing at a rate that is suitable for our needs without experiencing a burnout.

---

development that's sustainable

---

Meet the needs of the present without compromising the needs of others in future generations

---

Developing and growing within industries without having a negative environmental impact

---

Developing new ways to use things so that it will last for future generations

---

A way of improving where it does not affect the next generations choices and needs.

---

Continuous development without depletion of natural resources and without any negative affects on the environment

---

Advancement of society and economic postitons with limited negative impacts

---

A form of development that will not harm or negatively affect anyone or anything if done right.

---

Changes that are made for the better.

---

Development of the world in a way that doesn't further worsen issues such as global warming and climate change

---

Making a step towards using renewable energy, limiting the amount of fossil fuel use and helping the less fortunate.

---

Creating something, anything without wasting the earths natural resources and for it be able to maintain this avoidance of waste.

---

To maintain a good learning environment

---

Doing good for the environment and society and being efficient for the future.

---

To develop for our everyday needs in such a way that doesn't cause harm to our planet in the long run.

---

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

Developing methods to help preserve features of the environment for the future to use. So careful use of present objects for their preservation in so that they can be used in the future

To be able to develop in a way that benefits today's world but also doesn't harm future generations.

Managing resources in a sustainable (eco-friendly) way that there's left for future generations.

Change that is lasting environmentally.

Development without the limiting of resources for generations to come.

It is what young people keep having passionately.

To develop and progress as a society in a way that will not be detrimental to the environment in the long term.

Dunno

Don't know.

I believe it defines a fair development that does little impact to the factors around it. A constant development with a suitable amount of change being made.

A process where things can be developed consistently and continuously without sabotaging future generations.

development that doesnt compromise the environment for the future

The idea that human societies must live and meet their needs without compromising the ability of future generations to meet their own needs.

Developing something in a way that means it will still be there and able to continue on in the future

Moving forward without impacting the planet this badly

Something that doesnt affect the environment?

Development that can develop needs for the present climate whilst being sustainable and not negatively affecting how able future generations can meet their needs too.

Being able to take into account that natural resources are finite and so we must develop make resources around this idea

it means that developments can be made in a way that doesn't take away resources for future generations to come and the developments can continue without doing so

Development that meets the needs of people now without compromising on the needs of the future people and environment

Developing the world so it is better for future generations without causing damage to the environment.

A development that is long lasting.

Allowing businesses and the economy to flourish without harming the natural world or without sacrificing the peace of the environment.

to develop something, that has not a negative impact on the environment.

Something that will not negatively impact future generations

improvements taking into consideration the environmental, economic and social factors it may affect.

Being able to create a world that will be able to provide a good life for our generation as well as future generations. A world that focuses on collaboration and growth so we can all move forward together

Renewable resources without causing any carbon footprint. Generating your own use of power

Meeting the present needs of this time without compromising the the needs of the future generation using environmentally friendly developments.

Climate secure future

living and progressing in life without leaving a damaging effect on the environment and society for future generations and their quality of life.

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

Sustainable development is the idea that human societies must live and meet their needs without compromising the ability of future generations to meet their own needs.

Developing things that sustainable

Teaching people ways to take care of the environment and the people around them

Being sustainable is to try to live your life without make a bigger change to the environment. Choose carefully daily actions and avoid having a negative impact in the world.

Human development

changes that can make a difference in the long term

Sustainable development stands for the idea of living in a way that ensures that future generations can have the same opportunities we had including Human Resources, ecosystem, and population growth.

Development that doesn't use resources excessively, uses resources that are sustainable, considers the environment

development that does not hinder future generations

Thinking of long term and short term consequences when making developmental decisions.

Prolonging finite resources for the future.

Achieve a better future for all

Development that should take place without harming the needs of future generation.

ethical and good for the envriment energy wise

development that meets the needs of the present without compromising the ability of future generations to meet their own needs

Economic development limiting the waste and usage of natural resources

Being able to develop in a way that won't affect the future of the planet therefore being sustainable

how we can develop aspects efficiently, reduce negative impacts e.g. on the environment and thinking long term

Growth for long term

This is the growing of a sustainable future, one in which the necessity of a healthy environment is encouraged so that the generations to come would not suffer the consequences of man's negative actions but instead also have a healthy environment to live and call their own.

recycling helping environment reduce waste

Producing something by using resources that have minimal impact on the environment

Developing in a way that doesn't affect future generations

Development which is carried out in a eco-friendly way

Development that takes into consideration its impact on the environment and society

developing whilst being socially, economically and environmentally friendly

making sure that the needs of the future generation are met

Sustainable development is trying to achieve peace and prosperity for the future

Develop without damaging the environment

Sustainable development can be defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs. Sustainability address the global challenges, including poverty, inequality, climate change, environmental degradation, peace and justice.

Making progress in an area that needs improvement, and being able to grow towards a positive change in that area that can be done successfully

develop the society to function in a more environmentally friendly manner, so that we dont run out of resources such as fossil fuels

Future projects for sustainability

What do you understand the term 'sustainable development' to mean?

**Please write your answer into the box below**

This is the development that helps with the needs of the present without affecting the future generation's abilities to meet their own needs.

Some sort of development from the beginning

Developing your knowledge and keep learning at a advanced pace

not using all the resources we have and maintaing them

making usre we don't harm the planet whilst we grow

Encouraging human progress within the confines of finite resources available to us.

Development that can be achieved easily over time

Trying to improve our thinking about sustainability and learn ways to be more efficient in our every day life.

Development that recognises the fact that this planet we live in is loaned to us by the next generation and we owe it to them to use resources responsibly.

Development using sustainable recourses

a new program made to suit everyone

Maintaining development while still considering environmental impact, minimising resource usage and energy usage

organising society without harming other generations

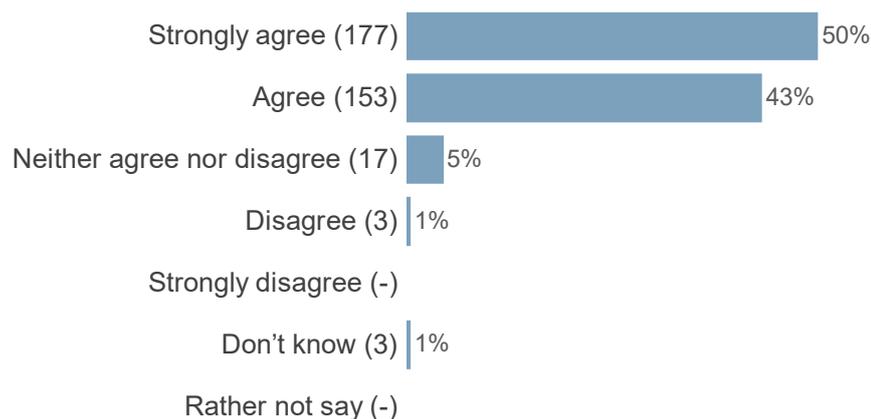

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

**Please select one for each statement**

**(Sustainable development is something which universities / colleges should actively incorporate and promote )**

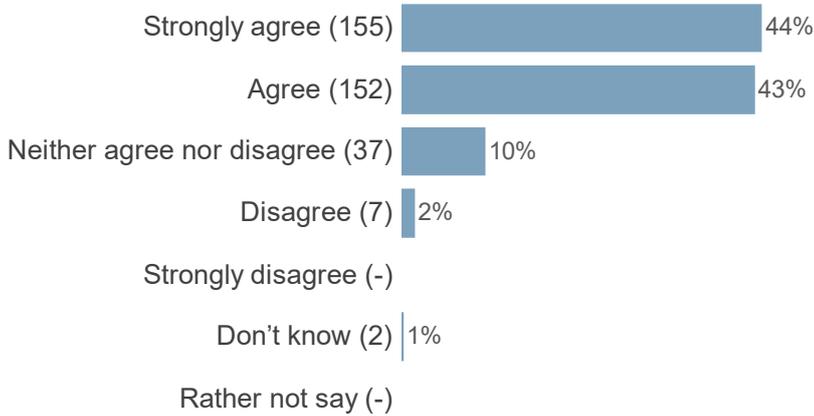

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

***Please select one for each statement***

**(Sustainable development is something which all university / college courses should actively incorporate and promote )**

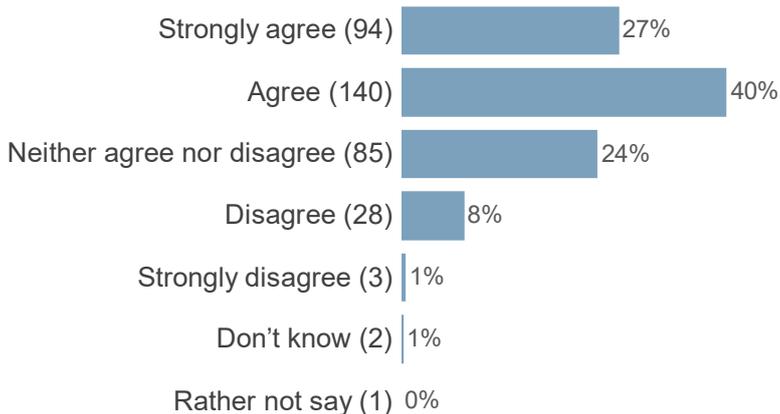

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

***Please select one for each statement***

**(Sustainable development is something all course tutors should be required to incorporate within their teaching )**

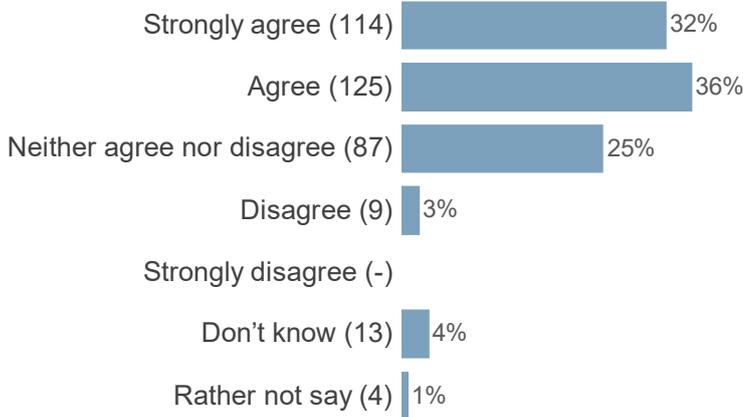

Taking a definition of sustainable development as:

“Sustainable development is development that meets the needs of the present without compromising the ability of future generations to meet their own needs”

To what extent, if at all, would you say that you personally agree with the following statements:

**Please select one for each statement**

**(Sustainable development is something which I would like to learn more about )**

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

---

I feel like If I knew more, I'd care about it more.

---

Bc it's highly important

---

Because we are reaching a point where our planet may be too damaged to recover, so we must do something before that happens

---

To develop knowledge to make a change in the environment

---

As the environment is changing rapidly.

---

May come in useful and make Me more aware

---

I would like to learn how being sustainable will affect the future job market

---

Because I don't know much about it and it seems beneficial and could make an impact

---

It is key to address and identify the goals in which we need to accomplish as a service.

---

I would like to learn more on sustainable development to be more aware of the impact that I have in the social and environmental context, both on a daily basis and from a professional point of view in future employments.

---

its interesting and essential to us as we need to look after the earth

---

Seems very relevant to help our society grow.

---

So far, I have not heard of sustainable development mentioned in my course.

---

To understand how I can make a difference to society and the environment

---

It's what will enable us to make a change in the future

---

How does it work? How to align progress and sustainable development.

---

Because I'm very concerned about climate change and wealth discrepancy and I want to leave a better world for my children if I end up having any.

---

So I can get a better understanding and use it in my future

---

I think it's important to constantly be learning about things you can do to help the environment and to understand your governments stance on environmental issues

---

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

I want to help to achieve this

to be able to understand the path that the world is heading in right now and how to improve the course so I can help be a positive addition to society and create a better change

I believe knowledge can be one's downfall or upliftment. There's always two side of the spectrum. Encouraging others in school and regular daily activities to implement good sustainable development practises in their lives can significantly help to preserve our resources for the future. If one uses less, it will serve for a longer period of time.

It is an interesting topic to know about. Why wouldn't anyone not want to know about it? Gaining different perspectives is amazing and hence I would love to know more about it.

It is a vital part of today's society and affects the coming generations massively

I would like to know more about sustainable development on a more local, personal basis rather than a global basis

I think to develop further understanding, and be able to apply to situations in real life

I want to be able to make a difference to the world and have a positive impact.

as it will help all the enviroment and other factors in my life thus change the way i think

As I'm interested in the development of developing countries and how their rapid developments are negatively impacting the environment but it would be interesting to see them develop sustainably.

I would like to know all the ways of sustainable development. I already know about the obvious solar panels, wind turbines and the general ones. But, I would also like to know about a sustainable development method that uses hydraulics for example, or how water can be progressed as a resource for sustainable development.

Useful to understand any legislation the government publishes to help protect the environment. Also, useful to see how companies react and are developing projects because of new laws coming in place.

i think that this is not spoke about enough in lower education. As in school and college i haven't learnt about this enough. And as a society we need to be more aware and focused on promoting and encouraging sustainable development.

just how we can do it to improve the environemnt

It is vital that all young people will know the affect of what we are doing to the planet now, so we can promote change in the future

Because I would like a better understand of the business world

to make an impact

I am thinking of the next generations. We should hand in a world to them better than what we have received!

I think it's very important to take care of our environment. Before politics and economics our environment is actually what makes the world go round. With issues of climate change increasing we need to do something! This is because the people/ countries who are contributing less to climate change are the ones suffering the most. So if I can learn more about sustainable development I might learn how to prevent these issues on an environmental social and economical level.

So that's can make small changes that can make positive environmental impact

The world is being used more and more of its resources. It won't be long until we have exhausted the resources. We need to incorporate more environmentally friendly ways to reuse already used materials.

So I too could make an impact

Because I would like to know how sustainable development could benefit us in the future. I feel like it's an area I don't really know much about and I feel like that's something I could improve on. My course works around helping people and j would also like to learn how to help the world we live in.

I would like to learn more because I think that sustainable development is a key factor in ensuring the safety of our future on this planet and people don't know enough about it.

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

---

What can be termed as sustainable, what can we do as university students to make the world more sustainable.

---

The best ways to achieve this

---

I'll like to know how I can help the future generation

---

I don't really feel I know much about this area at present and it would be helpful to have a better understanding of what it means and how it applies to my subject area

---

So that I can implement the learnt knowledge in my everyday life, to ensure I am an individual that contributes towards a sustainably developed future.

---

Often we put all our resources into things that don't make a difference in development

---

because I think its something everyone should be aware of

---

Because it'll become more important in the future

---

Because it will inevitably impact everyone's future

---

Ways to benefit myself along with society as a whole.

---

It forms part of our future so we should all be made aware of it.

---

How I can help and what it directly changes by doing so.

---

In order to incorporate this understanding into my future work, career from the start it becomes habitual and would reduce a Greta amount of otherwise added negative effects on the environment For when more people attain graduate jobs etc

---

Because it is very important and not taught about. It is going to affect the present and future generations.

---

Because if in near future me or my friends start a business I would know how to adapt and develop more eco friendly ways to save the future of our planet and our people.

---

To help preserve assets that are of use, so that they can be used for more years.

---

Because it is heartbreaking to see what we are doing to the world and animals and the fact that if we carry on, it will be irreversible.

---

To help environment

---

It would be useful to know more about how to make progress without too much harm to the future generations, and most employers would probably benefit from having an employee that knows it.

---

I don't fully understand what it is but it seems important to I'd like to learn about it.

---

I have a little understanding of it but even with the above questions I wasn't completely sure. I feel like it is something constantly present within the life of university and after, something like this should have more awareness and impact to students who are soon to enter the working world.

---

I believe it is key to ensure a sustainable future

---

it is important

---

Because even if we know that there's a climate crisis and human prgress is at its highest, we still don't exactly know what is gong in on and what can we do about it

---

It is important to us and also future generations if we'd like to maintain and improve our environment as a whole

---

it's necessary if the world is to continue, there's no point in being educated if the world won't be there to work in

---

I dont know anything about sustainable development

---

I would like to learn more about sustainable development because I would like to start doing my part in helping the world and creating a healthy world for future generations

---

Taking care of the needs of the future generations and the environment should be everyone's goal, in order to change the world into a better one for everyone.

---

You said you would like to learn more about sustainable development. Please tell us why you would like to learn more in the box below.

**Please write your answer in the box below**

So I can learn more about what I could do to help future generations and learn more about the impact one person can have

It gives the future generation a great and insightful perspective on sustainable development

It's an interesting topic that will make us lead a more meaningful and purposeful life if we understood its importance more.

Because I don't know about it

To know what more i can do and we can do within the environment to help the environment

There's always new things to learn.

I believe that in order to have equal chances in this life and ensure the same for future generations, we need to be more aware and active in such issues. I would like to know more the subject to make sure that I am contributing and making a difference in my community.

It sounds interesting and is relevant to the world we live in

to incorporate it into my future ventures

We have not learnt about it.

Sustainable development affects me and will inevitably affect my future career in Business. Business needs to be sustainable otherwise the world will suffer, we need to make changes now.

To make a better future for everyone

Sustainable development is essential for the future. There would be no future without it.

Would like to here how the uni is trying to achieve this - doesn't have to be forced into the content of the degree but where it's applicable I'd like to know

it's important especially today and could be done successfully if more people were educated on it

Already know about some of it, but always interested to learn more

The future is tomorrow

How to promote a sustainable development in the work place

Climate change is a key issue on the social and political agenda. We've seen many environmental issues that have occurred in various countries and it's vital to understand how we can contribute in tackling climate change and sustainable development.

to help the world better, make it last longer

I believe that learning about sustainable development can only be cause for positive change, which is something we need in society particularly in 2020

I am a Christian and believe that although the earth is very corrupt, we are here to tend to it. its a gift which we dont appreciate.

Because it will be very important for the future

it is very clear we are going to need to change the way we live. sustainable development is so important to this

I would like to learn more about how the human settlements can be shaped so as to be better for the environment and healthier for the people that live in them.

Global warming is a serious issue and i would be happy to do what little i could

So that I am able to help/make a difference

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

**Please write your answer in the box below**

Use environment-friendly facilities (like systems that prevent a waste of energy for example), have optional modules on sustainable development for each course, make students aware of how their chosen subjects of study affect the environment

Allowing students to go back to campus and start their uni life

Lectures

No

No

More webinars, print or email material with content about it

Not too sure but with some expertise and guidance we can come to a good plan

I'd like my university to be more engaged into sustainable development, e.g. by introducing an extra module on the topic in each course

Perhaps a lecture to inform students more about what this entails as I haven't got a full picture of it.

To provide students with more information about the environmental problems through seminars and actively encourage students to make a sustainable campus.

Teach people about it.

Implement an after university guide.

promotion of sustainable development and active courses on it

Social fines

Initiate sustainable development projects and make it mandatory for students to participate. Also, teach it thoroughly in every course and module.

Do more around the university to promote recycling

They should teach us how to create stuff for people and not just for making money

have a lecture on it

offering informative courses on sustainable development

none.

I have yet to experience on campus learning but from my virtual experience, the university consider all aspect of student life from surveys and try it's best to implement the changes on campus with practises of renewable energy, proper garbage disposal, electronic hand outs instead of hard copy.

Probably create more awareness by including it in PDP sessions or SU activities.

Unsure

Definitely speak about it more as it is something that is discussed but not as much as it should be. There should be a module covering this to highlight the importance.

no

by making activities in the student union that help us learn skills to achieve sustainable development

Incorporate how our courses impact the environment.

The best way the university can contribute to improve sustainable development is by teaching it to the next generations. But in terms of its own performance, I would say by using solar panels, or wind turbines. I don't really know the alternative methods to sustainable development, but having a farm of wind turbines that generate electricity to power the university might help.

Highlight sustainable developments the University has completed in recent time.

I think it would be good for each course to contain a small bit of content covering sustainable development.

no

incorporate into essay questions that apply to our subjects

N/A

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

**Please write your answer in the box below**

no

awareness week

n/a

access to more online resources such as books instead of having to buy the physical books

inform the students more on sustainable development subject in order to make them taking better actions in every day life.

Maybe having posters around the university with facts on them. Emails or information from all lecturers on what the university is actively doing to combat this and how we as students should and can get involved from the little to the big things!

No

More mods and extra curriculum

Send out monthly emails explaining what they're doing to help

No

Teaching the students more about it

Incorporate it into the degree. But make it fun. Dont make it another assignment because that'll out peoe off learning about it as they have enough work already. Instead try incorporating it through our personal tutors or through the student union instead

I think if some more environmentally/sustainability modules were available in courses that would be really good, across all disciplines as it applies everywhere.

Reduce non-renewable energy use.

Maybe there should be a session on sustainable development and caring for the environment during freshers week.

Not sure

More clubs promoting this. Start competetions to gain an increase in the number of people partaking in activities.

no

None

Bringing in on activities or share by emailing some articles or activities

More sustainable bins with recycling areas around campus

Usage of sustainable Materials

Maintain a clean England

A webinar to tell students what it is and what we can do to help. I don't know much about it.

University can start from minimising plastic waste, by educating their students and giving them assignments about spreading awareness regarding plastic waste and pollution in their communities can bring a very good change.

Something like litter picking, etc.

A challenge to see how much eco-friendly student can be for a week.

Universities should force all accomodation companies, privately owned and University-owned, to make recycling compulsory in their accomodations and dispose of their own waste in a recyclable way

I have not been told anything that my university is doing to contribute to sustainable development.

Focus on the issues that occur at this present moment of time - issues that will in fact impact the future generations positively. Such as racism, equality and diversity, mental health, support

I think that they are doing their best at the moment

They could try meet their students needs better i.e with accommodations and learning life

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

**Please write your answer in the box below**

no

Become more socially aware and incorporate these ideas into course content so it is not optional and so we learn how sustainable development affects our course fields individually

More recycling bins around campus

Nope.

I would like my university to raise more awareness about sustainable development and how we can help, as I feel that not many students know about it.

events and talks on this, and the tutors to teach that and incorporate that into our learning and teaching.

Potentially community initiatives. Also virtual/in person exchange programmes where you go to developing countries and initially try and think of how to tackle a 3rd world problem like lack of healthcare or lack of literacy based on what course you do and then trying to do something to change that in a small community eg fund raising to provide better healthcare or teaching youngsters English there.

seminars, Have a magazine dedicated to sustainable development, what is it, how we can contribute to it.

Teach its students about it more.

Promote a sustainability campaign around campus to inform unaware people about how living a unsustainable life can have a huge impact. Promoting sustainability week just to show students their everyday impact. For example, videos, data, talks and guides to live a sustainable life. Promote a strong campaign against plastic usage.

I can not think of something right now

Make more information available about what they are doing to be sustainable

no

No

Run workshops and educate people, promote more volunteering opportunities which impact the environment.

More activities surrounding sustainable development.

perhaps create sustainable energy through doors

N/a

incorporate it and for the students union to create awareness

NO, I already know there is a module (Engineering a Sustainable Future) that teaches that, and there is possibly a course in relation to sustainable development already existing.

no

More signposting and social influence

Use reusable/eco-friendly cups and cutlery in the cafes or pubs run by my university.

recycled materials e.g plastic bottles

Promoting the UN sustainable development goals and trying to achieve most of them across the wider uni university

Include more relevant information related to more modern day examples

teach sustainability in the laboratories

No.

More bins

A student committee

Using the UN SDGs as a basis, state explicitly how a module or course promotes one's understanding of a factor of sustainable development.

no

Do you have any suggestions on what actions you would like to see your university / college take to improve its performance on sustainable development?

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

---

I am more open minded and I think about the benefits and cons before I do something

---

I think I'm a much more empathetic and understanding person I became a vegetarian after learning about the effect that the meat industry have on the environment I aim to lead a lifestyle that has a minimal effect on the environment

---

Climate change is a big issue, many species are dying due to it

---

Learning about consumerism has helped me to understand economics a lot more

---

has helped me improve as an individual and made me more willing to help create a change for the better better general knowledge of the world.

---

Made me more aware of issues we face today

---

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

My learning has affected my level of waste produce on a daily base. I revamp many of the bottle, containers or jars from purchases and use them as drinking water, food container storage, candle holders. In my opinion, it's "killing two bird with one stone". My consumption and diet is strictly organic. I only purchase from markers market and local meat shops, but I have my own small farm in my backyard for certain vegetables. Not only has learning about sustainable development impacted my household life, it significantly plays a vital role in my careers decision. It motivated me to take up active roles in voluntary organizations to help others, bring awareness on better living practise to many. Beforehand, I did science-based subject in high school and A -level, currently I do International Business Management with Modern Language French to learn about proper organizational behaviour in hopes of reconstructing renown and small scale businesses to consider sustainable development in core areas such as production.

Learning about democracy made me want to do more for my people. CSR made me want to choose an employer that follows it. Health and wellbeing helpd me to exerceise and eat well.

Learning these issues impacted my view on the world and how I live my life on a day to day basis, allowing me to be more aware of serious problems that we are facing globally

allows you be more aware, and apply to general situations to help improve. Allows you to feel knowlegable and aware to make changes

It has helped me to think more widely about different aspects and issues in the world. My aim for the future is to make a difference and help have a positive impact on the environment.

it made me a better person (more empathetic)

lack of diversity and racism

Learning about democracy taught me about how important it is to vote and research what each party claims to do in areas that you think are important for example, environment, education, health, etc. The teaching of renewable energy taught me the alternatives that have been created and used to help combat the damage that humans are causing to our environment and makes me more cautious about how much energy I am using and doing simple things like turning off lights and water when not using it. Since learning about ethical trade I try to use less fast fashion as I know how damaging it is to the environment as well as things like next day delivery, as well as shopping Fairtrade so that those who work in foreign countries earn livable wages. The implementation of mindfulness and meditation in form times in education allowed me to implement it into my own life as well as doing physical education encouraging me to go to the gym. While learning how many rights I didn't know that we are supposed to legally have and how many people around the world aren't given them and it challenges me to want to create more equality. When learning geography for my GCSE's it opened my eyes to social geography and issues like the north-south divide and encouraged me to take work experience for HS2 and that project help reduce inequalities between the north and south.

Learning about social injustice and an abuse of ethical rights has led me to believe that the world is bad. I have a very cynical perspective of life. I tend to believe that everybody in the world is bad, but the so called 'good people' are instead decent or normal human people in doing what I believe to be a standardized way of acting. For example, if somebody helps somebody else, they are not necessarily good people but instead 'not bad'. A decent human being should do the actions of what 'good people' do, and rather than being praised and highlighted, it should in fact be a standardized way that every human being should act upon.

Helped take care of environment look to recycle more than I would have otherwise. Look at what companies do for volunteering and what charities they are involved in to help make a decision if that is something I am interested in.

i think it helped ,me become a more rounded person, with a stronger outlook on the world and my perception of things.

made me more aware of how us as humans have a affect on theenvironemnt

not much as the teaching was inadequate

learning to accept myself for who I am, learning to not allow other personal appearances affect my choices.

n/a

made me think more about the consequences of my actions

it has helped me be more aware and open to learn more and accept changes related to them

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

-

Knowing more made want to research how I can reduce my personal carbon footprint. I've considered changing my diet. I always walk where possible and try my best to use the best mode of transport if not. I try re-use plastic bags and recycle. But I'm currently looking where I can find more information and if there are organisations I can donate to, to help less privileged countries and to support the wider issue. I would also like to share with others what they can also do.

Made me realise that I can do small things to help the environment

I try and keep my mind and body healthy as it plays a large role in my wellbeing. I also try to look for more to reach out to my community.

Makes you stop and realise there are people who are suffering and worse off than yourself

I am able to have more educated conversations about the environment we live in

Made me more aware of the world around me and made me aware of how us humans can affect each other and the world around us. We have such a big effect both socially and environmentally.

Learning these things has made me a more well rounded and aware person, this benefits me as I analyse all sides on a situation that are important rather than just thinking what benefits me.

Did not affect day to day or bigger changes except for reinforcing thoughts of how idiotic and selfish and stupid people are, especially those with power to run countries businesses etc

Learning affected my day to day life by realising how much of a fast result generation we are and how we demand quick results in everything we do and that has a poor result on the planet and it depletes many aspects of it. So I feel like the younger generation are key to a more sustainable planet.

Recycle more

Nothing, the delivery of these discussion was poorly done. It did not provoke any thought or self reflection.

It has made me more aware of my actions and their consequences

Learning about these various issues has helped me to understand them more clearly and how they affect society.

I feel I have learnt more about some of these outside of the formal education environment. Documentaries on the tv/internet have affected how I think about issues. E.g. excessive plastic packaging and waste in the workplace is frustrating. Colleagues who don't attempt to recycle are just as irritating especially when facilities are available.

More conscious of waste, preserving energy and recycling

It has developed my mindset and the way I act towards other people. This includes being more patient, kinder and creating less waste through food and water. It has made me more aware of my surroundings in terms of how fortunate I am compared to those in LEDC. Due to this, it has ensured that I have a more positive outlook and as a result, am more able to appreciate the blessings around me whilst also advocating for change for those things that are unjust.

I become more conscious of how I treat people around me and my environment.

hasn't

Help me understand more about the affects on others and ourselves

Made me more aware of my day to day actions and the effect I have.

Deepening my understanding of the world around me

Learning citizenship allowed me to be aware of my surrounding in society

Not much

It has made me more aware of the issues around me. I now try and think about the impact my actions have and ways of limiting negative outcomes.

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

It's made a great impact on my life had I not learnt about these topics they wouldn't come as normal or natural to me understanding the diversity in nature and people allows for personal growth and understanding of other cultures and perspectives on a way of life. They seem now like basic things everyone should be taught as a way to grow cognitively as well as socially and build solidarity. Something ethics and such has taught me is to know that your actions may effect others and to fix the root of that problem not the people at the end of it.

It has made me feel as if I'm very kind hearted.

It has made me do my own research in my own time to learn more about it.

Since I have learnt this as a child so and during the times when environmental issues were not important, so it didn't affect me much but from the recent awareness programmes I have attended, I try not to consume products that use too much plastic, I carry my own cup and glass water bottles to avoid plastic waste.

It makes me think about what impact I have on the world itself.

To consider different factors before doing something that can critically change people's lives.

Learning about these issues in more depth caused a large change in my values. My future caree has remained fairly constant throughout this time, however my values and reasoning for this career has changed.

It helped shape my values, such as feeling like a world citizen, feeling a part of the EU, and also understanding climate change threats and the beauty of having such a diverse ecosystem

I think learning more on these topics makes an individual understand the importance of them, you have a greater understanding on who it affects and what can happen regarding that topic in the long term. Getting more knowledge on subjects like this make me value them more, I am more conscious of what I do and the values I hold when I learn more about topics that matter and appeal to me.

I think that learning about these issues has helped my personally by making me more aware of the world around me and globally, becoming more conscious of the consequences of my actions

i'm able to view global issues from different perspectives

I like to think I am more aware

It made me feel more conscious about my impact, wherever I was throwing food away, or buying extra plastic bottles of water and so on

Created more environmental awareness and encouraged me to be more active in certain aspects like my personal carbon footprint and being better at donating to charities to help people elsewhere who do not have the same abilities as I do

it's made me more aware of my privilege and the repercussions of my actions

It has made me more aware of the life skills and enabled for me to have a better understanding as well as adapting my knowledge into the world.

Learning about the issues I ticked has helped me to take care of myself and the people around me. As I have learnt about human rights and citizenship, I know my rights and what I am entitled to. For areas like biological diversity, that has encouraged me to learn more about the sciences and the world around me.

Learning about equality and the climate change and all of the issues that the world is facing, made me more aware on how to choose my future employers based on my own values and to be responsible myself to take care of the environment by doing small changes into my lifestyle.

It's made me realise more about how our day to day activities have a much wider impact on the world. Things like how small consistent actions of one person can make a difference even if it is small like recycling or reusing or planting a tree

Good Awareness for all these issues and was always informed

It made me more conscious about the environment and the effect I can have on it with my life decisions.

Understanding the imporrtnance of renewable resources and actions to protect the environment.

It change gradually the way I see the world and how I set to live my life.

**What impact, if any, has learning about any of the issues in the previous question had on you personally?**

*Please write your answer in the box below, thinking about how learning affected your day to day lifestyle as well as bigger changes such as your values and your aims for your future career*

Learning about human rights and inequality at an early age made me realise that I need to view others the same way I like to be viewed and understand the existing inequality in my community

Made me think about the products that I use, made me value sustainability and the environment and the impact on other people.

none

They are all relevant and interesting topics that need to be discussed during education in order to develop students understanding and shape their thinking. These topics are important and can shape students values.

I have become more considerate of the resources I used and think more long term.

just try to care more about the environment

I am more thoughtful about my actions and more open minded

It impacts my personality in a positive way as to comply with laws and regulations and having the conscience to know what is right and what is wrong.

It's helped me question what my habits to see if I can make a difference

awareness, incorporating aspects or educating others

Try to be more eco-friendly by recycling, reducing waste, reducing water usage, eating more local produce etc.

Has made me more aware of my individual actions and their contribution to sustainable development. Hope to implement or pioneer something sustainable.

Taking actions to improve my lifestyle and encourage others to do so, e.g. Not wasting food.

I have learnt to use less electricity to save energy, avoid using plastic bottles for sake of the environment

It's allowed me to further develop my interests and as a result I've become quite passionate about humanitarianism and environmentalism

None

Learning about these modern day issues as well as their impact on the future generation has made me more self-aware of my actions and their consequences; how it could impact others

I have always tried to be more environmentally friendly. but truthfully speaking, although I may have learnt this in secondary school, my morale was only affected by the things ive learnt on social media.

Anyone

I have learned more about more life issues and the changes we have gone through as humans

Not as much i feel media influences more

Not loads of influence because i felt my reading outside of school had more of an impact

Learning about ecological systems at college led me to become much more interested in this topic, and led me to attempt to pursue a career in urban planning or public transport.

Helped to shape me as a person

I don't feel much of an impact from the issues.

Helped inform me of the wider world and encouraged me to improve myself to contribute to a better world,

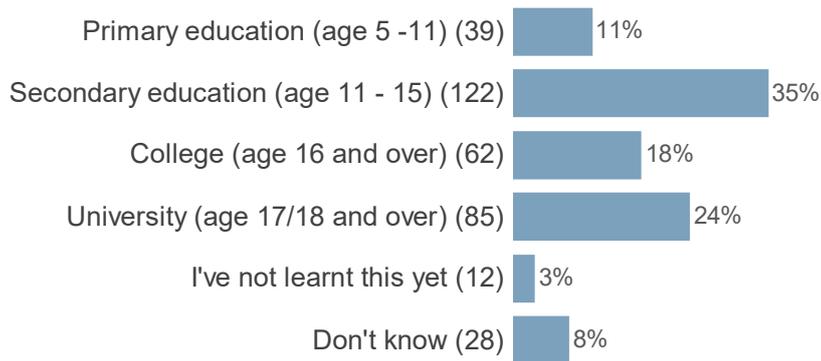

I make extra effort to go out my way to use less energy

-

Still thinking about your experiences in education so far, what place where you have studied...

**Please select one only**

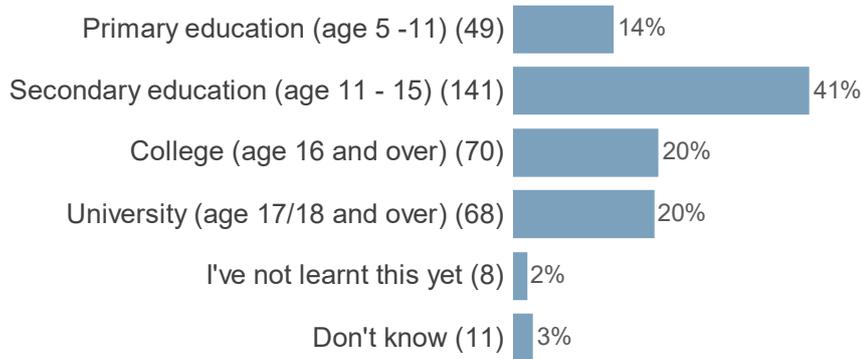

(Acted to reduce it's negative impact on the environment and society the most? )

Still thinking about your experiences in education so far, what place where you have studied...

**Please select one only**

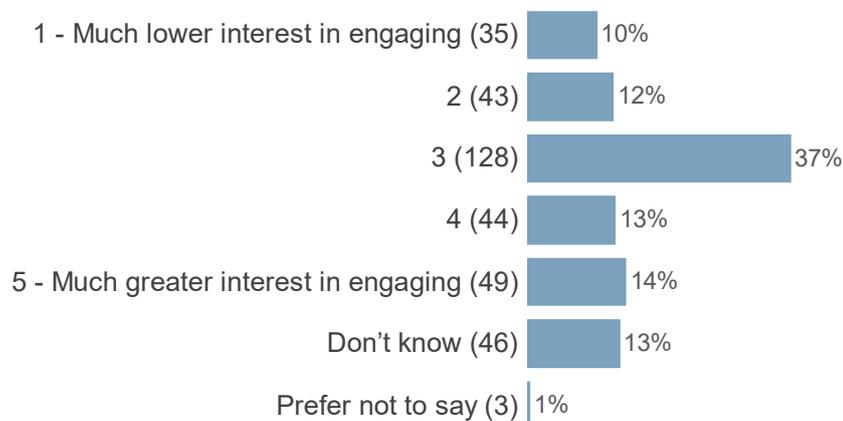

(Encouraged you to think and act to help the environment, and other people the most?)

To what extent, if at all, would you say your interest in engaging with different learning experiences linked to sustainable development has changed due to Coronavirus (COVID-19)?

**Please select one only, using the scale 1 -5 where 1 is much lower desire to engage and 5 is much greater desire to engage**

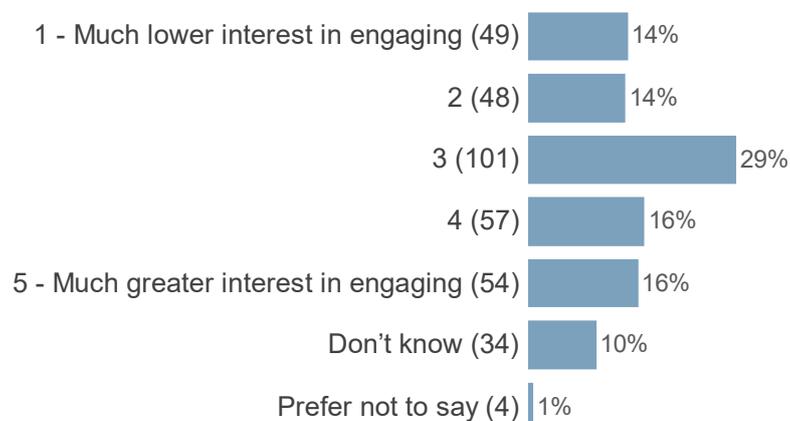

(Formal learning experiences that are part of your course e.g. courses, modules or lectures linked to sustainable development)

To what extent, if at all, would you say your interest in engaging with different learning experiences linked to sustainable development has changed due to Coronavirus (COVID-19)?

**Please select one only, using the scale 1 -5 where 1 is much lower desire to engage and 5 is much greater desire to engage**

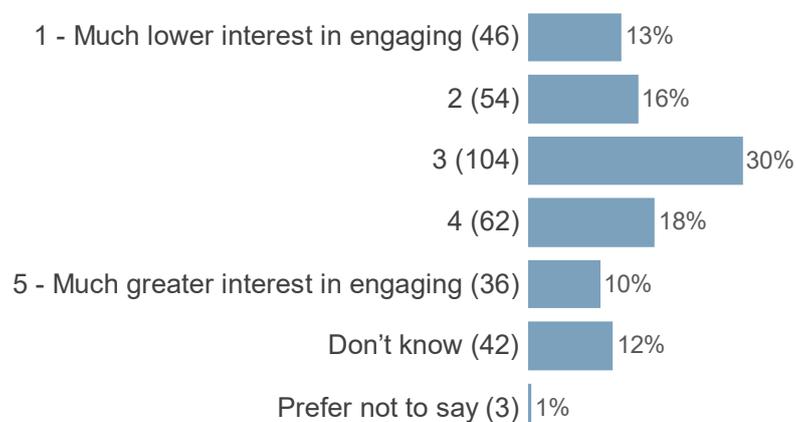

**(Informal learning experiences offered by your university / college or students' union but which do not count as part of your course e.g. volunteer opportunities, events, clubs)**

To what extent, if at all, would you say your interest in engaging with different learning experiences linked to sustainable development has changed due to Coronavirus (COVID-19)?

**Please select one only, using the scale 1 -5 where 1 is much lower desire to engage and 5 is much greater desire to engage**

**(Informal learning experiences offered by organisations outside your university / college / students' union e.g. community group or campaign)**

You said Coronavirus (COVID-19) has led to a lower interest to engaging with learning experiences linked to sustainable development.

Please use the box below to tell us more about how you have been negatively impacted.

---

COVID 19 makes me feel less likely to engage with ;earning about sustainable development as I have less time and energy to spend on activities that exist outside of the classroom setting. I also find that taking courses outside of the classroom more difficult to learn actively from.

---

Not been able to experience the fresher week aspect of uni life. Not made any friends.

---

Due to lockdown and consciousness of my health

---

Lower motivation due to a constant online teaching- is demotivating when you're alone at home.

---

You said Coronavirus (COVID-19) has led to a lower interest to engaging with learning experiences linked to sustainable development.

Please use the box below to tell us more about how you have been negatively impacted.

With everything University wise basically being online, motivation to engage with online learning experiences has dramatically decreased as a result. This means that learning anything has been reduced quite a bit.

I do not enjoy online learning.

Due to coronavirus the charities I volunteer with have not been able to continue due to inability to use the usual facilities of location. The other charity have changed their location which means I can't get there easily and safely (I would have to use public transport, in the evening when it's dark).

Unable to attend external events that raise awareness

Covid 19 has consumed a lot of people's time and energy. There is only so much worrying anyone can do, something has to give and environmental issues are the first thing that people forget about in a crisis. It's a case of focus your energies where they are needed at the moment.

Jobs

Due to Covid-19 our course leaders have had to organise the course in such a way that we have limited practical experience which is very important for our course, and due to that everything just feels impossible now as we have assessments straight away and not many people are able to pick up the pace quickly enough so its unfortunate and stressful

Less social interaction

People are less motivated to get involved with all the opportunities the uni has to offer

Online classes about anything seem tiring and exhaust me mentally so it's difficult to engage with any learning experiences .

Not being able to work with others as easily

n/a

Coronavirus has impacted my mental health to the point I don't want to get involved in anything.

Less motivated to work

No sessions have been run on it, I just watch the news less.

Difficult to get involved when you're isolated at home

During COVID, my university has not been the best help and has just dumped all the work on the students

On news too much focus on the virus than environmental problems

Lower interest in everything in general

The content isn't stimulating and I have always had issues with focusing which is significantly harder without the structure of going into lectures. Not enough help has been given to help with the transition to online work either.

No motivation to take part in the activities offered

Due to COVID-19 I have been at home so most of my communication is via e-mail and sustainable development hasn't really been covered within any of the communications I have received from the university.

No opportunities for volunteering with any organisations

It is harder to engage with these topics if they are not face to face

Since the consequences of COVID-19 have been imposed, it feels like a the biggest problem currently, even though overall it's probably climate change. Since it feels like it affects our lives more directly in the present.

Events are often online and mean no face to face interaction. Hard to stay focused and hard to get inspired

Difficult to meet coursemates, which can be beneficial for doing work together. Also, a lack of face to face lessons for languages reduces my motivation massively.

Just the lack of motivation

You said Coronavirus (COVID-19) has led to a lower interest to engaging with learning experiences linked to sustainable development.

Please use the box below to tell us more about how you have been negatively impacted.

The courseworks that were on offer have been withdrawn as part of the course and the teaching has also reduced leading to less interest

Online lectures are not as engaging as in person lectures

I will not be able to attend any workshops in person, and due to online learning I have more course material to go through on my own, so I do not have time to do extra things

I'm personally not. But everyone is worried about world precovid and saving the economy in era postcovid

Because the change of the environment has intrigued me

All my course is online due to Covid-19, therefore I haven't needed to go onto campus which had lowered my interest in engaging

I just feel like, there isn't much point in doing anything right now. I feel as if my life and university experiences have been put on pause. The only reason why people do such things is to engage with people who have common interest. But what's the point if you can't actually meet with them.

With the covid situation its harder to meet people outside and go places where we can learn new things

im not socially interacting and i think that's a huge part in finding about information about activities etc

without the stimulus of being surrounded by people like me i think i find myself to be more lazy and laid back than i was before, i find it hard to complete the work on time and i dislike the style of teaching online however i do realise its necessary and compulsory to me i still hate it

Can't meet as a group

less access to teaching

Had to work more in order to cope with a change in routine hence leaving me with less time to read up on news

You have to stay in your flat for the most part. no oppurtunities to mingle with other peple and meet others.

I have been negatively affected by online learning as all the lecture material is pre recorded and includes nothing to do with sustainability

Online learning has made me a lot less motivated to get up and study about a lot in general. Unfortunately it's due to the fact that lectures are recorded and I know myself that if classes were in person I'd be more likely to be more engaged in learning.

Learning isn't the same and requires more motivation so just getting your modules down is main priority. And searching for a job hasn't been the most successful and is also discouraging

Dont know

less motivation to learn in general

I prefer being able to actively engage with others in real life rather than through technology

COVID-19 has outrightly forces many including myself to stay indoors and make the best of what is in the households. It's affected my regular activities in ways that I have been complacent in my behaviour. Majority of the days are spent sleeping, few internet interaction and practising bad eating habits such as eating in very small quantity at unusual intervals in day. However, we, as human beings, have to adopt to our new lifestyle. Slowly changing my mentally has gradually influenced some of my regular activities such as better eating, attendance at online schooling, voluntary participation in student-led organization. IThe engaging factor has significantly decrease but inevitably, it's improving.

The focus on Coronavirus has led to a lack of awareness for sustainable development from my experiences

I'm just tired of all this situation and not having much interest in anything

I'm not ebeb motivated to learn about the course I chose, let alone sustainable development

All my work is now done remotely, I have less social interaction with my peers, although it has not affected my mental health as much as others, seeing the overall effect that the COVID-19 has had on mental health does make me sad.

You said Coronavirus (COVID-19) has led to a lower interest to engaging with learning experiences linked to sustainable development.

Please use the box below to tell us more about how you have been negatively impacted.

As I have been less likely to travel into University and engage with clubs/societies also less chance of holding an event to engage members as most of the activities were held virtually.

my learning experiences are online due to covid, so i think my engagement for anything is a lot lower

Going out with friends or seeing family in other countries

zero motivation and do not feel confident in what i am learning

harder to engage and change of format pushes students away from interacting with their colleagues

Less opportunities

I don't want to travel unless it's necessary. Don't want to risk my health.

If it's to do with volunteering do you to social distancing rules it's physically impossible

Because I'm not in university much I don't get to see the campaigns and stuff and u don't get to speak to people in my course much so don't hear about whats going on in uni much either through them

I feel there is less opportunity to engage with informal things now that lockdown is happening etc.

It's a different type of learning when it's online compared to when you're sitting in a lecture hall whilst seeing the lecturers real passion in the subject he's teaching

feel mentally drained - uninterested in many things

I have had to more between places for my safety which has disrupted my learning

It's much harder to join societies and to even focus with learning as lockdown has caused a negative effect on my mental health

I've been less engaged with my work

It's hard to make change to the world locked away at home.

No face to face interaction

Was not able to go out, became more demotivated, could've used my time but need to find ways to become more motivated.

Not being on campus means I'm less likely to join groups that help the community

The worry of covid and the future was enough to keep me occupied with worry

Due to less interaction with others, I've lost interest to engage and listen to ideas and work together to help the environment

I'd be more engaged if I could physically go to university & attend lectures or workshops or events linked to sustainable development

It feels like there are more pressing issues related to coronavirus, lower mood in general, more activities related to coronavirus to take part in

It is harder to learn online than in person.

Experience isnt the same. Paying 9grand for a uni experience which isnt even university isnt fair. I know everybody is in the same boat and peopler are facing harsher times however paying 9k a year to sit at home and skype call my classes just doesnt cut it out for me. Really lowers my motovation.

More people inside, less face to face learning

It isn't as interactive therefore there is less interest in these subjects

Being at home i feel we are less informed of events and are more confused on how we can improve this

Due to not being able to have classroom environment.

becuase i don't physically have to be anywhere it's easy to get distracted and do something else

Ease of interaction

Low working Morale

it was made to seem unimportant

You said Coronavirus (COVID-19) has led to a lower interest to engaging with learning experiences linked to sustainable development.

Please use the box below to tell us more about how you have been negatively impacted.

I've had bigger issues to worry about in regards to family and health relating to COVID 19, these have taken priority over learning about sustainable development.

it has made everything harder with less experiences

no events/ clubs/ societies running in the same way or face- to- face meetings

The virtual learning has removed the tangibility of the learning and has made it much harder to focus and concentrate.

The University didn't adapt any of their experiences to the the pandemic. They just shifted all learning online without any support for their staff or students, simply focusing on profits

since we are not allowed to go out of our houses

Many events and activities related to sustainable development have been moved online which has been quite difficult to gain value from

Non in person classes or meetings make me feel like I am not in uni and completely disappoints me

Less motivation to study

the fact that university be paying 9k+ for just online lessons, it is harder for new university student to make friends

**You said Coronavirus (COVID-19) has led to a greater interest in engaging with learning experiences linked to sustainable development.**

Please use the box below to tell us more about why you say this in the box below.

There has been positive environmental changes due to COVID-19 which led me to think I can help make a change too

Because COVID-19 have changed the world a lot

We know more impacts and are being taught more

More learning resources

COVID 19 makes me feel less likely to engage with learning about sustainable development as I have less time and energy to spend on activities that exist outside of the classroom setting. I also find that taking courses outside of the classroom more difficult to learn actively from.

Need experience at this stage of education

I'm more interested in meeting people in person or over zoom in clubs and societies and such. This has made it easier to discuss sustainable development and other things easier than pre-recorded or unengaging lectures.

To learn how can I help to make a change or make the university to be aware of the negative impacts that the covid-19 caused in our development, our studies, experiences, and opportunities.

pandemic has changed the course of life

As a Biomedical Science student, this is at the forefront of those aspiring to be BMS's as COVID testing is at the forefront of NHS care

It has been shown how by the population being in lockdown and not using their cars as much we have reduced the pollution and i think it is important to make a change and carry it on.

The pandemic has made me look at life in a new perspective. I now appreciate it a lot more and would like to know more about how I can help sustain it and make it a better place for others

**You said Coronavirus (COVID-19) has led to a greater interest in engaging with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about why you say this in the box below.**

Covid-19 has changed the way of living for all of us and has given us all an opportunity to sit back and think how we have to pay for our negligence. It has given me one more reason to engage in the learning experiences linked to sustainable development. We can survive when we live in harmony. Power concentration leads to destruction. Covid-19 has taught us to be compassionate and that it's high time we started implementing sustainable development in all areas of life.

Highlighted increased consumption, use and waste of non recyclable items, such as PPE. Also the effect that less use of fuel etc had on the environment in a positive way. Highlighted what a throw away culture we have.

I am very shy so engaging online is easier for me.

Maybe it's because of my Challenges to Climate Change module, and I am in my final year, I want to learn as much as I can. I wish it was a mandatory module that overarches throughout our degree.

to sustain in future

online events

I can't afford to drive so it's much easier to get to online classes.

Because now we do a lot of online classes which reduces travelling and carbon emissions

It's showing the bad side of humans, racism, bad economy, corruption, pollution

It has shown me how important it is to look after our existing resources

I had more time to look into things I am interested in, and covid made it clear we all have to act towards the same goal if we want change.

The world needs everyone to come together and I feel hugely responsible that I need to learn and help more to create a better future for all of us. I encourage my peers and people around me to have the same mind set.

Coronavirus came about due to our actions as a global community. I want to know more about why we find ourselves here today.

I believe that since we are out and about less, there is much less: waste being produced, fuel is being burned and co2 emissions. Feels as though lockdown has been a blessing in disguise, where it's taught us that we are able to do things remotely that we never thought we could.

Through lockdown I was able to focus on things that really interested me and so I've continued doing online courses and reading up on fields of biology past that.

I understand that we have more time to engage and think about sustainable development and methods to developing sustainably. Ever since coronavirus has taken place the environment seems to be nurturing again as companies are unable to carry out work actively, this is preventing global warming and negative impacts which are normally taking place my companies through supply chain activities, factory work, use of energy and certain production of products which include deforestation etc.

Having spare time and needing some direction.

It was like a reality check, showing you how much the world can be impacted by one change , and why it is so important to start trying to save the world

Having lessons moved online, have more time on my hands to learn about these things and develop my knowledge

Ensuring we can bounce back from this pandemic into a stronger, more unified world with common visions and reduced self interest.

Spent time focusing on what is important to me during lockdown

I have greater knowledge on how to sustainability be more hygienic and consider the health of others

I have realised methods to steer the world back towards the sustainable Development goals. Change into a profound systemic and more sustainable economy for the people and planet.

More free time to do research

**You said Coronavirus (COVID-19) has led to a greater interest in engaging with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about why you say this in the box below.**

---

The future is uncertain so acting upon our actions now can reduce negative impact on the environment later on.

---

Everyone is taking their time to understand what is happening and how to make things better and widening their knowledge

---

Covid as changed the way economies are functioning. Till the virus stays, we need to think of sustainable ways to protect ourselves, use less plastic or think of alternatives to plastic. Use reusable masks and provide clean water and food that is not only free of the covid virus, but of other diseases too (that usually affect people in poverty)

---

Because now we see what sort of remedies the world has that are cheap yet environmentally friendly

---

As I have had more time to expend, I have come across and watched several documentaries related to sustainable development. Our world is threatened by a variety of factors, in order for us to prosper past this adversity, we must take global action. All businesses must adopt a sustainable approach to all aspects of their business, in order to contribute to this global action. Hopefully in the near future I will own a business, and I want this business thrive in this world. I want to be able to contribute to the sustainability of this planet if I have the means. Therefore, engaging with more learning experiences linked to sustainable development will only fuel this endeavour.

---

More time to learn it

---

It has given humans an opportunity to reevaluate how we impact the environment

---

well COVID gave a large opportunity to structure businesses in a different way. many company's do not like to change however COVID has led to company's having to change. Now they know they have the ability to change and adapt they may feel more comfortable to implement other changes

---

I managed to stay positive by keeping myself active because I try to volunteer

---

As resources were needed during this difficult time

---

I'd like to engage in social volunteering outside of the university environment.

---

Sustainable development seems important so I should learn about it

---

This is because, in my opinion this allows me to take notes in comfort and without distractions.

---

Coronavirus has emphasised the uncertainty in the world, enhancing the need to protect the environment

---

When the world is stuck, Nature positively changed, and we saw how beautiful it is. so why not keep it like this?

---

Coronavirus showed us what is wrong with our societies, governments and economies. Also it showed us how wrong some of these flaws are. Therefore, in order to be prepared for the unexpected, we must all have a more sustainable lifestyle and make everything more crisis-proof.

---

During my first term i have taken a climate change module and due to Covid meaning I have more spare time, I have been able to educate myself more

---

this situation has shown us that we should care more about the environment

---

Volunteering in the SU helped me understand sustainability better. Only susatainable development methods were being followed.

---

lifes to short

---

as covid19 has helped me realise that living in an sustainable enviroment is necessary for having good mental health

---

With how coronavirus really limited travel, especially flights, it has intrigued me how much pollution was reduced and with studying economics, it goes hand in hand with how people affect all environments (social, economic, environmental, etc.)

---

**You said Coronavirus (COVID-19) has led to a greater interest in engaging with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about why you say this in the box below.**

Due to COVID-19, students can now see how the world is much bigger than themselves. Normally, we would live our lives, irrespective of the world, the ecosystems and climate change. But COVID-19 puts a second perspective in things, and makes us re-evaluate the significance that the world cannot sustain in a perfect world, and in-fact one day a virus can come and hold the whole world frozen in despair.

i think it has opened my eyes to a lot of things

Because my course, economics, is affected heavily by what goes on and the covid case is the biggest economic shock in history

more accessible

made me think more about others with the extra time i had

I don't think Covid-19 has anything to deal with it. But I guess because less people are active in this season you can get the most out of sessions, ask questions and really connect with the speaker more compared to if there were more people present. Which then increases the deepness of the knowledge one would take away.

Less people are going out meaning the earth is less polluted

If it's online it's more accessible

Lecturers are working even harder to try and make topics more interesting as they know online learning is difficult and I am passionate about this subject so it continues to interest me.

The one major benefit is it's a lot faster to engage with as if you commute to uni it saves you a trip and you can just crack on with it at home

I believe that everyone should now care for the environment more than ever before as the virus has led to vast amount of changes within society. Like nobody should litter their used tissue papers anymore etc as this only harms our wellbeing.

Covid-19 has taught me what is truly important. Materialistic items are secondary compared to family and the world we live in. I have realised how losing a loved one changes a massive part of an individual's life. It has taught me that because someone is not suffering on the outside, that it does not mean they live a content life. Covid-19 has taught me the importance of being kind and considerate. It has taught me that regardless of the amount of items we possess, what truly matters is the people that we let surround us. It has taught me the significance the outdoors plays in our life.

I now want to take part in something that will get me engaged with others and on my feet

You want to make changes to ensure we don't have to end up locked down forever

Because the reduced traffic as a result of Coronavirus has lead to a slight respite on the environment. It'd be nice to keep that going

Because it is a very significant factor that perhaps complicates sustainable development

Since I have access to the internet and university online I can explore more on my course.

From home, it is a great way to increase my knowledge on what I can do to help.

Had more free time to learn about these issues

There is more online learning and technology that I havent used before

More time

Nothing else to do

Because now I have had more time to think about it and seeing how the immobilization of the world helped the planet made me realize we are the problem

covid-19 has shown how much humans damage the earth/ecosystem, during lockdown one there were many cases of better air/water quality, animals returning to previous habitats so it's made me interested in learning more about sustainable development so we can limit the impact we have

Because there is a lot of websites, content out there for us to use and follow. :)

## You said Coronavirus (COVID-19) has led to a greater interest in engaging with learning experiences linked to sustainable development.

Please use the box below to tell us more about why you say this in the box below.

I wouldn't say COVID-19 itself has created a greater interest for me, but it is actually the lockdown part of COVI which has led me to learn new things about the world and developed an interest in engaging in more activities linked to sustainable development and the environment.

During this pandemic you realise you are running out of time, and that things may not be the same again, so it is time to act.

People are at home more and have seen with the last lockdown what not littering does to the environment

It's made me realise that we take so much for granted when we could use the time we have to get involved in initiatives that are more meaningful and have a wider and long lasting impact

I have seen the effect the virus had on us and how we lead our life. I made me reflect on how we can make better choices that will help us de more prepared if this ever took place again. The news has also pointed out the positive effect humans quarantining had on the environment, but also the effect of masks being found in large numbers in our oceans. These topics made me interested in how I can make better choices for future generations.

This pandemic made us produce more waste, especially plastic eg. Masks, gloves, grocery shopping...

It made society more united. I think people now care more about each other now more than ever before.

Easier to connect with everyone online. You do not have to worry about where how and when you will be meeting.

To inform and prepare us to conduct more effiicient sustainable development

With everyone struggling in life due to COVID-19, I believe that learning more about sustainable development can only make us grow in the right direction towards positive change (as a humanity who are all going through similar struggles) due to the pandemic

This may help to reduce CO2 made by cars since most of the new jobs may be as telejob

To be more aware of the world and development

The air quality difference in lockdown showed how much of a difference we made

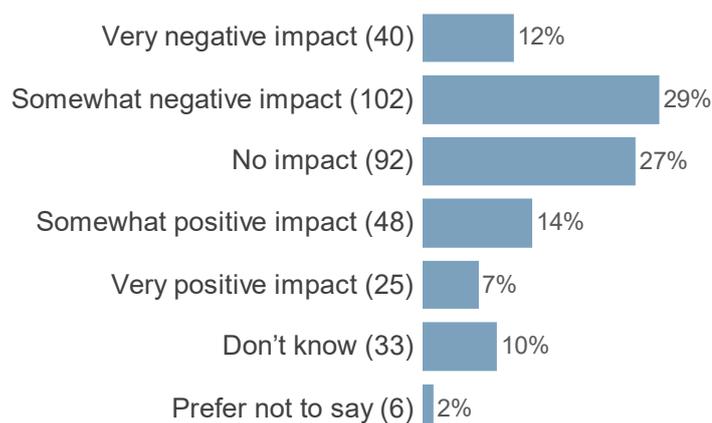

Because of the way precautions against the pandemic have shown how important it is to act sustainably and try mto make less of an impact on the environment (such as not driving all the time).

It is a real life scenario that everyone is living through

What impact if any do you think Coronavirus (COVID-19) has had on your ability to engage with learning experiences linked to sustainable development?

**Please pick one for each option**

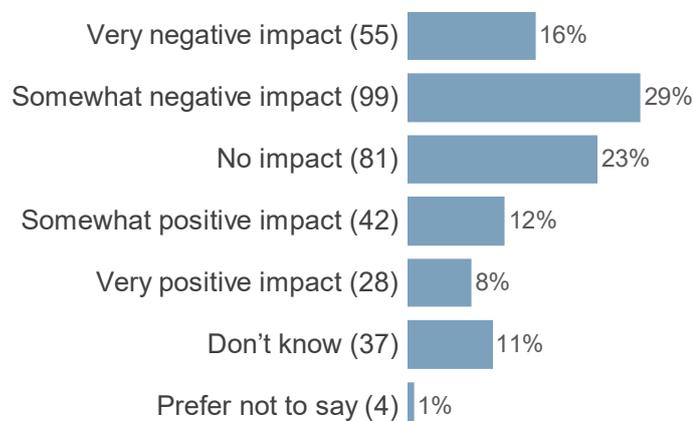

**(Formal learning experiences that are part of your course e.g. courses, modules or lectures linked to sustainable development)**

**What impact if any do you think Coronavirus (COVID-19) has had on your ability to engage with learning experiences linked to sustainable development?**

**Please pick one for each option**

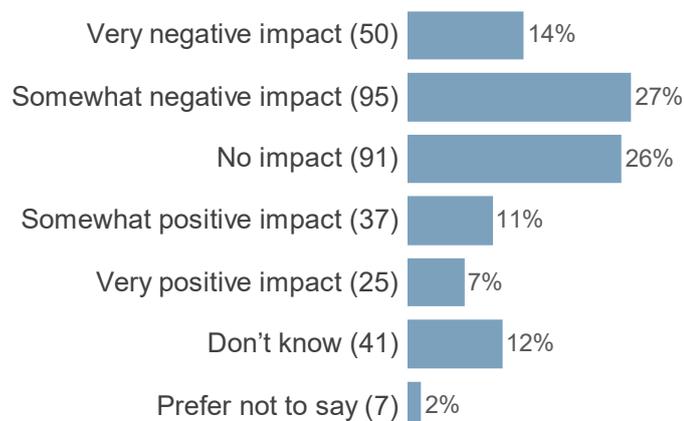

**(Informal learning experiences offered by your university / college or students' union but which do not count as part of your course e.g. volunteer opportunities, events, clubs)**

**What impact if any do you think Coronavirus (COVID-19) has had on your ability to engage with learning experiences linked to sustainable development?**

**Please pick one for each option**

**(Informal learning experiences offered by organisations outside your university / college / students' union e.g. community group or campaign)**

**You said Coronavirus (COVID-19) has had a negative impact on your ability to engage with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about how you have been negatively impacted.**

---

University is not helping us but instead gave us more work during crisis and expect us to finish. No job, low on money, paying rent and need to focus on work

---

Mental health has been impacted.

---

More difficult to engage

---

Less motivation to work

---

Put me off watching news and being engaged in world affairs.

---

Coronavirus is a lonely virus, it separates us. The community of student union is no longer present due to the pandemic

---

**You said Coronavirus (COVID-19) has had a negative impact on your ability to engage with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about how you have been negatively impacted.**

Arent able to experience new experiences due to covid

All students will be lacking the willingness to engage

Activities can not currently run in person the same, so the content has to be delivered in a manner which is appropriate online

Again, I have been at home so I haven't been in an environment where these issues may have been voiced (for example by groups/societies at university).

Face to face discussions are more engaging and fun rather than online activity.

Just being at home and being at a higher risk when going outside

No face to face contact. Hard to feel inspired by the work of others

Unable to attend in person sessions / cancellations

Not able to have things run in person so less things available to me

Lack of motivation in some areas

The teaching offered has become virtual and it disadvantages students who are more inquisitive and have further questions

Everything online

When studying in Spain last year my courses where cut short as both Spain and England went into lockdown, because of this it stopped my learning into my 'energy and water' module in which I had been learning more into the relation of water to energy and their respective environmental impacts

being confined to work in a single space can be very de-motivating. Being one of the few groups in society forced to carry on as noraml while the rest of the country stood still during the first lockdown felt polarising and lonley

All extra activities are online and difficult to access

Can not socialise and interact with lectures

The natural course of learning requires human face to face learning, this is just a natural way of learning. Learning through technology is somewhat similar but is limited and different answers are given to the same question leading to confusion. Reassurance and deepening of learning can only be provided by face to face teaching

I find it harder to learn online than I do in person such as seminars and lectures etc. Also due to Covid 19, restrictions mean that I cannot attend organisations of the SU or outside volunteering etc.

Learning has become less engaging

We wouldn't be able to go onto campus to learn about it

Same reason as stated before

Less likely to go out of home to learn new things and how we can have an impact

By stopping me from working in the industry of innovation and infrastructure.

being in my room at uni or even stuck at home, i feel less connected to my course, uni and my classmates, especissly in situations like a group assignment. i dont like the methods of online teaching being so relaxed and it makes me nervous that im not going to be disciplined enough to continue with my studies in years 2 when ill have to prepare for a placement as well as maybe i would of been had the virus never occurred.

Inability for communication or anything social

not truly being connected to my teaches as it is all virtual. Before COVID there was communication but sadly I feel like there is a lot less. I also really enjoy to idea of going around conventions and physical showing my enthusiasm to employers

Less events and opportunities

Because you not able to take part during your learning online

**You said Coronavirus (COVID-19) has had a negative impact on your ability to engage with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about how you have been negatively impacted.**

lecturers are pre recorded so we cant elaborate on issues such as sustainability

Not being able to physically engage with others hinders a lot of voluntary work

Due to government restrictions there is only so much informal and formal ONLINE communications can benefit individuals and furthermore drive action.

Social distancing prevented many informal meetings and volunteering opportunities from occurring  
have not had the chance to go in normally and attend big lectures

online studying is not good

Clubs - unable to partake due to covid.

First of all, because of online learning. Secondly, because it has hindered any kind of learning on account on students having worse mental health during this time.

online learning

Online lectures cause more distractions as I am in my room where there are easy distractions, as well interaction with my professors has been hindered so it is hard to get the full learning experience.

Due to not being in university or lectures I have less information about sustainable development

it gets boring to keep join virtual activities

Limited to physical things which bring awareness when you are on campus.

As an international student, my learning is completely online. Eventhough, I am free to ask questions to my mentor or lectures, it is not the same. I do not know how to manoeuvre the online learning platform to the best of college dream, I am still learning. As such it affects my involvement in the clubs and activities that I would regularly be a part of, because even with guidance, I am still lost on the "HOW"

Online lectures are the main priority for universities and delivering them, sustainable development hasn't really been the main focus.

mentally tired

as it can disrupt peoples mental health

Not being on campus and less opportunities has lead to them being negatively impacted.

There is no in person teaching so there's no point in even being at university

All events were held virtually, led to less opportunities to enengage with events.

havent been able to socialise with others and get the 'uni experience'

find it more difficult to concentrate

some facilities are no longer accessible

Sometimes finding the motivation to learn can b difficult. Also adjusting to a new way of learning was quite challenging but I think I'm getting used to it now.

Don't want to risk my health

Not being in university much has made it hard to get involved with stuff. I'm at home most of the time now especially with the second lockdown

Just that they are less accessible because of lockdown/restrictions.

It has taken a toll on my mental health

no

I learn better in an environment with other people. It's harder when you're on your own

Not being on campus means I'm not likely to meet these groups

Haven't hD the opportunities previous years have had.

It has made me feel more lazy as I'm not in a suitable environment and it's more easy to slack off.

**You said Coronavirus (COVID-19) has had a negative impact on your ability to engage with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about how you have been negatively impacted.**

Not able to meet people

It is hard to engage in any activities virtually, most people get distracted and many face connections issues which really distracts me and push me away from doing it again

Same reason as previous

Be restricted in a way helped me focused more on what I want to do however learning wise the level of understanding is lower.

there are more opportunities to learn about covid-related issues than non-related issues like the environment, lower mood in general, lower inclination to do extra-curricular activities more in general

COVID is bad for everything

COVID-19

Since everything is online, I'm not getting to experience the learning link to sustainable development

All lectures from my university are not online :(

The situation has negatively impacted my mental health and it's hard focus

No face to face

It is hard to engage with these learning experiences online

We are more focused on getting content revised

everything is online so it's harder to engage yourself in the activities

There are many fewer opportunities

I haven't been as forthcoming to get involved in things as covid has made everybody more cautious to be out in public and to interact with others

Delivery of lectures

Loose focus

Not being able to go to university often and meet other students and working together

COVID-19 makes me more wary of going to places unnecessarily, I'd rather learn from home

most activities where suspended

COVID 19 has given a prioritization over the health of loved ones, therefore sustainable development has taken a back seat.

online learning is disengaging

COVID cases and deaths are increasing and the stress of daily life

unengaging

Makes you feel couped on, imprisoned. The lockdown has meant we are locked up physically and thus, mentally

It makes me feel put of uni. Learning at home is much harder than in in person classes

COVID-19 is a scary thing for everyone, thus learning experiences about sustainable development seems unlikely due to lockdown

Idea of not having many on campus lessons

With things having a pause in how things go

Because I cannot go anywhere and doing things online all of the time is tiresome.

Less motivation to study

Havent communicated properly with students, internet problems affect online seminars

**You said Coronavirus (COVID-19) has had a positive impact on your ability to engage with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about how you have been positively impacted.**

---

Being more independent

---

It made me stay indoors more and think of things that have now reduced such as travel and comparing it to how it was like pre covid

---

ensuring that waste is reduced, reusable masks etc

---

resilience

---

Those that are on my course as well as myself are now more knowledgeable regarding topics such as immunology and biochemistry relating to COVID. As well as many new job opportunities and unheard of/different job roles that have been introduced

---

I am very shy so engaging online is easier than in person

---

Having virtual learning sessions instead of going to the physical university space has tapped a desire to be more engaged. For the LK3034 module, it ties it back to the current climate and the consequences that the environment will take in an attempt to bolster the economy again.

---

we are using internet more and less physical infrastructure and utility.

---

I can't afford to drive so it's easier when everything is online.

---

Made me more motivated to learn about sustainability and how I can help.

---

I have encouraged more and it has allowed me to learn and come out of my comfort zone.

---

Lockdown gave me the time to really delve into sustainability and other such topics.

---

having spare time

---

Covid-19 made me care more about sustainable development

---

I have been able to partake in research about the impacts of COVID 19

---

Learning how the global supply chain had been affected by social factors such as panic buying and how these supply chains had to migrate entire business units to meet demand in other sectors

---

Lack of motivation in some areas

---

Made me more independent

---

I have been positively impacted as I want to learn more about what we can do as students to help sustainable development and make a change for the better of the future.

---

It's allowed me to be more aware

---

More time to learn more about it

---

Because you have more time to take a part in activities

---

Made me think about it a lot more and try not to waste resources

---

Not affected in this aspect as I can learn about this online.

---

I have developed a routine of notes/tasks I perform daily.

---

I have more knowledge and understanding on sustainable development

---

I had a plenty of free time, some of which I spent on learning about sustainable development.

---

Having more time I have been able to learn more through reading that I now understand sustainable development much more

---

N/A

---

some online conference is free now

---

spent more time helping others improved my mental health

---

Virtual learning resources are a lot more accessible than they used to be which is very helpful than having to go and find a book or articles in the library.

---

More accessible information

---

**You said Coronavirus (COVID-19) has had a positive impact on your ability to engage with learning experiences linked to sustainable development.**

**Please use the box below to tell us more about how you have been positively impacted.**

The student union offering a different range of sustainable learning which you'd not get in a lecture hall to be fair would be great per COVID but it's not hindered it in a negative way

Given me more time to know more about issues like recycling

Covid-19 gave a hands on learning experience. This is because during the lockdown phase, everything that was taught through academic materials could be experienced in person. This includes the reduction of CO2 emissions and the positive effect it had on the wildlife.

More time to learn at home

Had all the time to look into sources

By not fiddling with the Mother Nature or else it's anger has much other viruses store for us

We don't currently have the full university experience due to not being able to go in and all learning has to be conducted virtually which is very limiting

More free time to learn about these issues

It has reduced my learning work as I feel I don't understand as much online rather than shown in person.

There are some opportunities online which are engaging

While staying at home and not being as productive as I am used to, my interest in informal trainings like student unions has increased so that I can have a sense of purpose.

Being home all day, makes you think for everything that is happening and you want to engage more in learning activities.

I have had to cook and learnt how to sew which has reduced my need for fast fashion and packaged food

Because it's a way to learn more and know how to make the difference.

To allow us to live and work normally

It's for efficient raking online classes

It's giving the time to learn more

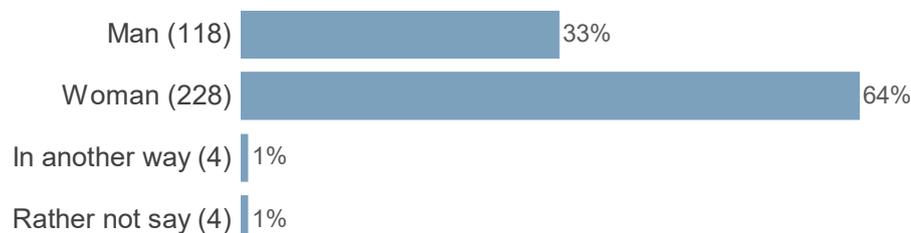

has put things into perspective

had more time to study in lockdown and focus on my studies

none

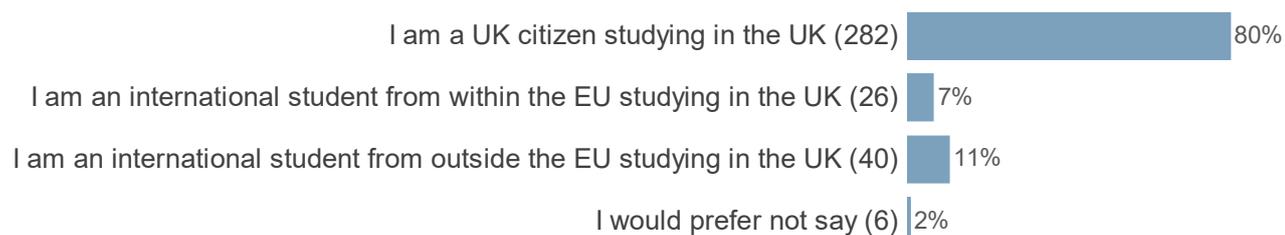

**Which of the following best describes how you think about yourself?**
